Clifton drill results

VANCOUVER - Clifton Resources has received results from the 1984 exploration program on its Proserpine gold property near Barkerville, B.C. From 14 diamond drill holes totalling 1,908 ft., a 1,000-ft. strike length on two separate gold-bearing structures was tested. Assays from the five holes drilled on the Bell structure ranged from 0.108 oz. gold per ton over 4.0 ft. to 0.434 oz. per ton over 2.7 ft.

GCNL #124 27 JUNE 1984 CLIFTON RESOURCES LIMITED (CLF-V)

GOLD PROSPECT OPTIONED - Clifton Resources Limited have concluded an option agreement on the Devils Canyon gold IN CARIBOO DISTRICT, B.C. property in the Wells-Barkerville area, Cariboo district, B.C. President John Lloyd, P.Eng., says the claims contain extensive old placer operations and quartz veins which occur in the adjacent slopes. Preliminary geological and geochemical surveys are now in progress.

On Clifton's other Barkerville area property, the Proserpine property, located 5 miles SE of the Cariboo Gold Quartz mine, work completed during 1983 outlined numerous gold-bearing quartz veins and strong geochemical gold anomalies along the 4-mile length of the claims. A \$100,000 trenching and diamond drill program is scheduled to start here before mid-July.

GCNL #144 26 JULY 1984 CLIFTON RESOURCES LIMITED (CLF-V)

DRILL TEST STARTED ON A - Bruce E. Spencer, P.Eng., a director of Clifton Resources Limited, reports that diamond CARIBOO GOLD PROSPECT drilling on their Proserpine gold property in the Wells-Barkerville area of B.C. has started. The initial drilling will be concentrated along a 1500 foot strike length where trenching in 1983 exposed gold-bearing quartz veins with values as high as 0.442 ounce gold per ton across 6.2 feet.

Geological and geochemical surveys on Clifton's Devils Canyon property, also located in the Wells, B.C. area, have been completed and results are being evaluated.
