

OUTLINE OF 1978 PROGRAM, BIG MISSOURI PROPERTY

1. The Big Missouri property consists of 74 Crown-granted and reverted Crown-granted claims owned 100% by Tournigan Mining Explorations Ltd. It is located 30km (19 miles) by road from Stewart in the Skeena Mining Division of British Columbia.
2. The property is in a heavily mineralized belt and is underlain mainly by Lower Jurassic volcanoclastic rocks, the same rocks that were host to the former Premier ore bodies that lay 5.6km to the south along the regional structural trend.
3. The property includes a former Au-Ag producer, the Big Missouri Mine, and a number of old but promising Au-Ag (\pm Pb, Zn, Cu) prospects, most of which are mineralogically and geologically similar to each other and to the Premier ore bodies.
4. Sample data collected mostly during the 1920-1940 period from surface and underground workings indicate that three of the prospects contain mineralized bodies that would, if the property reached production, constitute 'probable ore reserves'. At the present stage they can be considered as potential tonnage.
5. Exploration since 1974 conducted by Tournigan and by an optionee has confirmed the promising nature of the showings and has expanded on and improved the geological concepts that are basic to exploration in the Big Missouri Ridge area.
6. Thirteen areas on the property are recommended for exploration involving limited rehabilitation of underground workings, trenching, extensive sampling and diamond drilling. The old road from the Granduc road to Hog Lake will be repaired and a summer camp for 11 men will be established at Hog Lake.

104 B046-07

7. Fifteen men will be employed directly in the field exploration phase of the 1978 program. Ten will stay in camp and five will commute daily from Stewart. It is expected that eleven of these men will be hired from Stewart (an engineering technician, a cook, a bullcook, a sampler, two trenchers, four miners and a handyman). The repair of 9km of road to Hog Lake and the construction of the camp at Hog Lake will be contracted to Stewart firms.
8. The total program will take two seasons to complete and will cost approximately \$700,000. The 1978 program will cost \$300,250.
