Utah J.V. with Windarra Group (?) Moraga R.L.
609 Granville, Ste 1030
688-1508

moe was in Calif., consults for BSP-Utah
on expln in Island copper area.

Utah dreamed the Husham^o property ~20 yrs ago
South of Nahwitti Lake. Old EXPO property.

Drilled off 58 million tons of minable reserves
(at 158 to 180 mt geol. reserves) at { 0.32% Cu (.41%st)
0.012 oz/t Au (.37%st)
0.01% Mo

New drill program in 1990 confirms grade
but at increased tonnage

Independent engineering study currently updates reserves.

Too far to truck to Island Cu mill, but could
~~pipeline~~ pipeline it. All downhill.

Utah will pipeline Escondida ore to coast.

Care stored at Island Copper.

Monoflated by silica dome - epithermal or
high level characteristic.

Magnetite breccia flanks one side of deposit
along periphery of Qtz-Kfida porphyry.

Alteration is advanced argillic, with pyrophyllite
like Island Copper. High level Al-rich intrusion.

Note location at head of Hushamu Ck.

possibly pipeline route all downhill to Island Copper
18 miles straight line, ~25 along contours.
