

Deck Brown - talk on Frenchman Cap discollement
& structure Dec 1/78.

view on Goldstream - Definitely volcanogenic, occurs
in carb. schist type rocks just beyond pinch
out of a greenstone unit.

Host rock problematical - pelites that
could pass to similar lith in either
Horseshoe Ck or Lordean - favors Lordean
although rocks are known from H.T. Ck also.

Structure in overturned panel 'Goldstream Nappe'
Dipout that is off the plane of
crust section shown.

Parent contacts with
H.T. Ck across creek from
Goldstream - can't
correlate.
