Subject: MEG Talk-KEMESS

Big turnout-good talk. Will bring notes with me next week. Bottom line is work continues unabated on Kemess South. Rio Algom has been retained as technical advisors to St. Phillips Res./El Condor. In addition, Rio have just completed preliminary drilling on their adjoining (to the SW) NOR property and plan to resume the planned large-scale drilling program in February. The calc-alkaline affinity of the monzodioritic intrusives on the entire Kemess property, as well as the apparent spatial/genetic association with "Toodoggone volcanics" is/will undoubtedly refocus attention on the Toodoggone area next year. Publication of the TOODOGGONE Bulletin should be timely. Tom.
