

HW Zone 15×10^6 tons ; area $4000' \times 2000'$

- Initial drilling at 1400' spacings to 2600' depth
- 40 holes drilled before HW zone discovered.
- After discovery drilling sections reduced to 500' spacings with holes spacings on sections @ 150-200'
- establish oil reserves
- Detail drilling for development at 100' spacings, reducing to 50' spacings* (i.e. after shaft sunk to 18 level)
- (* factor of 4)
- new work leading to discovery prompted by ideas developed in part from relogging old holes.

LYNX - During production 1967-1980, drilling rate of 75,000' / year was sufficient only to maintain 3 year level of reserves (exploration and production drilling, latter at 50' spacing.)

PROPERTY HOLDINGS

5/6? MINOR LEASES

45 CLAIMS

25? CROWN CLAIMS

10,000 acres (CMHB 1990-91)

APPROX. DIMENSIONS

9500m x 3500m

- ≡ 33.25×10^6 m²
- ≡ 8215 acres
- ≡ 3325 ha.
