Shear  
92H/15

Phone call from

Phil Whitney - worked on Shear claims drilling project - for Blackhawk Drilling this summer.

6 holes drilled - 2 north of highway } close to  
4 south } power line.

~ 3500' total.

Holes on north side close to area of Ablett's highway interchange (west side), holes about 900' apart. - area of old showings (open cuts, small workings (Cu + Ag vein, sampled by Randa & myself in 1985)

Says core 'looked good' - Ablett in almost daily attendance. glass in hand

. Core recovery not very good where needed - (drill is a '44') - too much drilling fluid washing away part of return.

Charlie Graham + Ablett + ? = claim owners.

> 200 units.

Says he stopped at Glacier Kamboos office yesterday? - thinks they think they have enough encouragement to have a go next year.
