Mineral Exploration Consulting

Mining on Vancouver Island Strong Tradition - Great Potential

- 150 years of mining tradition on the Island beginning in 1852
- Highly varied & rich mineral deposit types reflect the Island's complex geology
- C\$24 billion in today's prices produced
- C\$26 billion in reserves and resources
- Many new deposits yet to be discovered

Vancouver Island Deposits

Selected Developed Prospects on Vancouver Island

Valentine Mountain Project

- 261 Mineral Claim Units – 6500 hectares
- 2 MINFILE Au-quartz Vein occurrences:
 - Valentine Mtn. 092B108 Discovery Zone
 - Developed Prospect – 30,660 tonnes @ 14.7 g/t gold = 450,700 grams gold on C Vein (indicated resource in 1990 – may be inferred resource under NI43-101)
 - BPEX 092B075 Braiteach Zone
 - Showing - 5 kilometers west of Valentine Mountain
- Gold Mineralization Corridor – 7km X 0.5km

Similar Gold Deposits

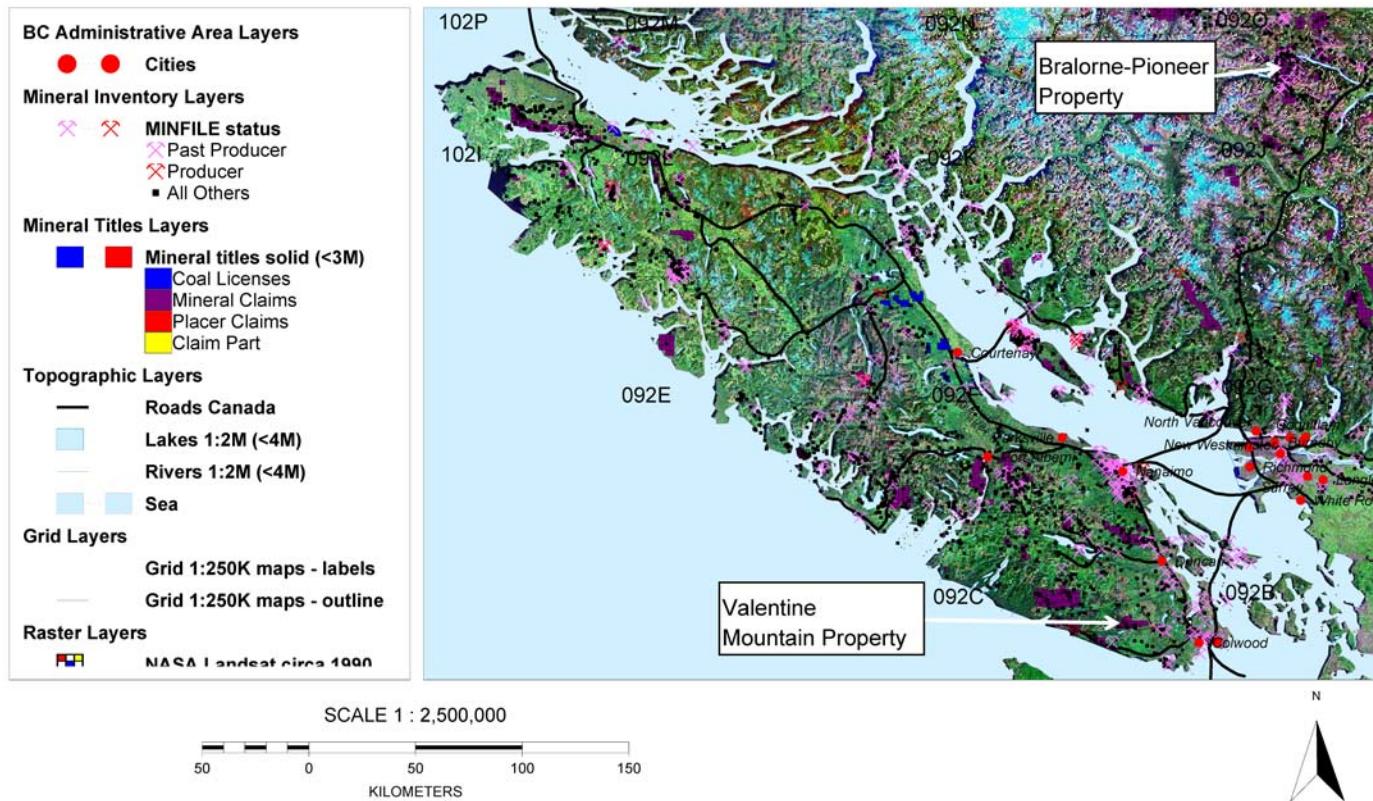

British Columbia Exploration Target Model: Bralorne-Pioneer (Bridge R.)

- Past production (1899-1983):
 - 7.2 million tonnes
 - 18 grams per tonne
 - 130 million grams gold
 - C\$2.2 billion value at today's gold price

Priority Exploration Targets

Discovery C Vein Long Section

Recent Accomplishments

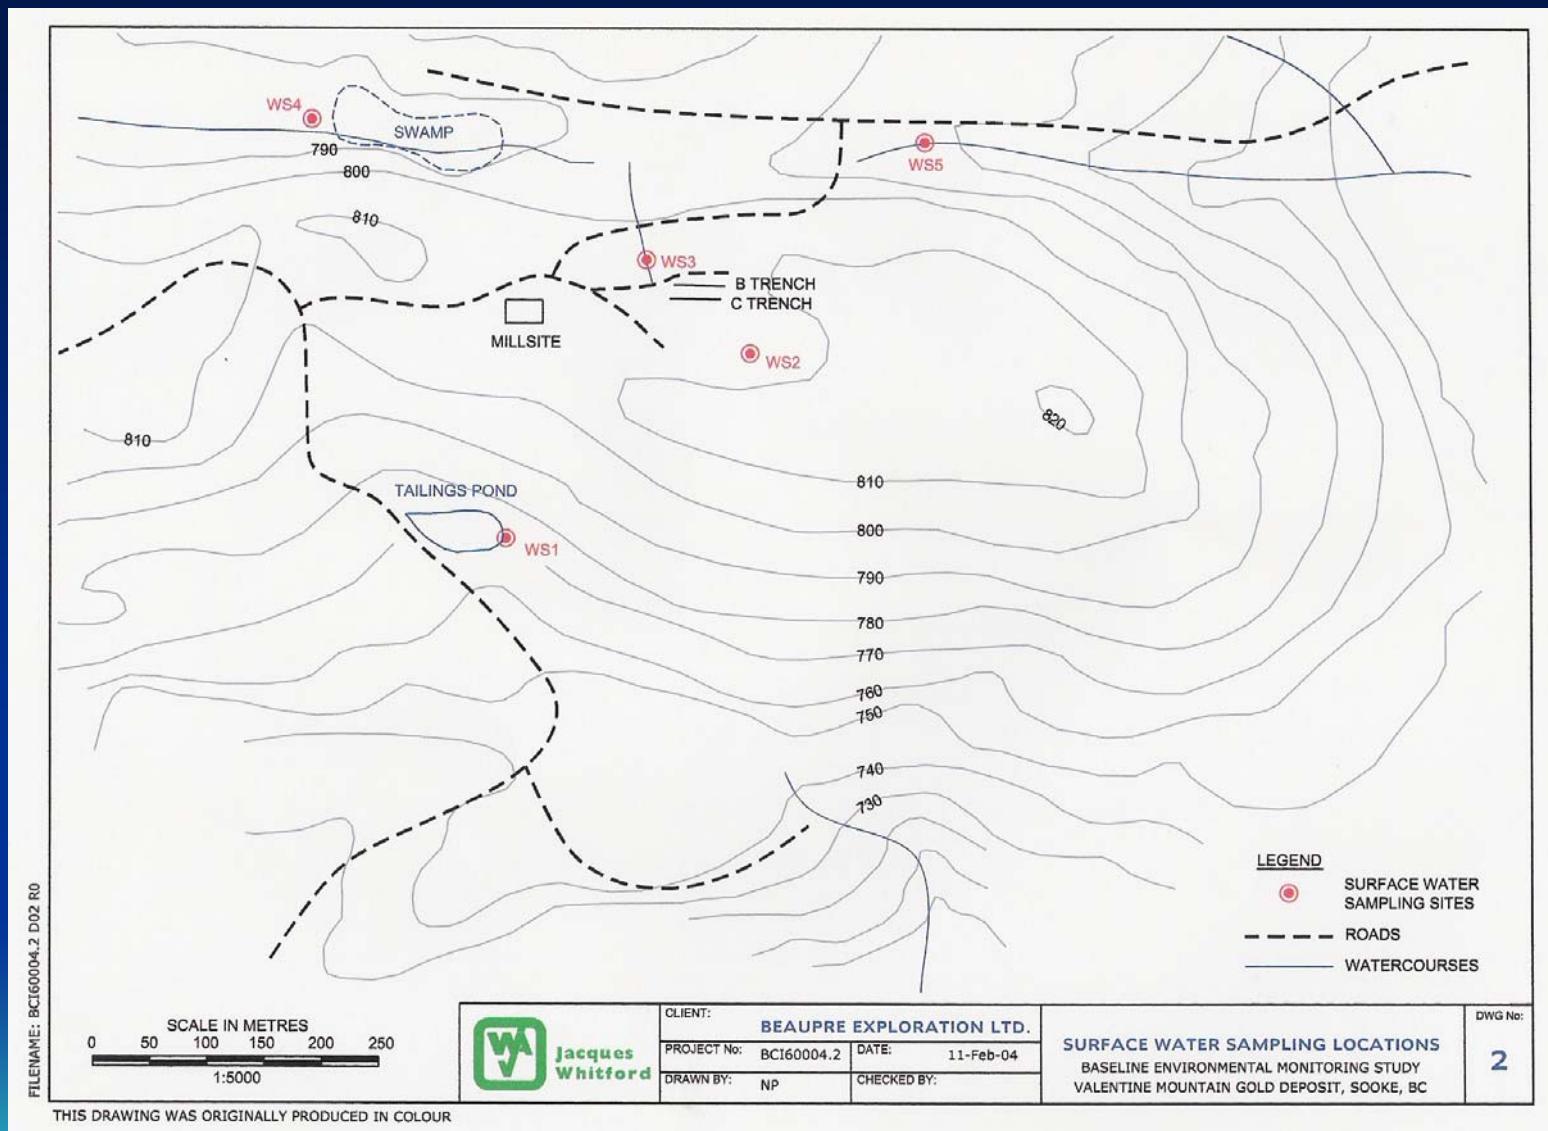

- Established Baseline Environmental Sampling Program by Jacques Whitford
- Commenced G.I.S. Compilation by Don MacIntyre (10-25% complete)
- Completed deep diamond drill hole at Discovery West Target
- Resumed activity at Valentine Mountain

Environmental Program

- Naturally acidic surface waters with elevated Al at all sites, locally Zn and Co
- Dissolved metals in leachates from rock samples below BC discharge standards
- Mineralized rock likely ARD generating
- Footwall rock possibly acid neutralizing
- More sampling recommended, along with further evaluation of tailings pond

THIS DRAWING WAS ORIGINALLY PRODUCED IN COLOUR

G.I.S. Compilation

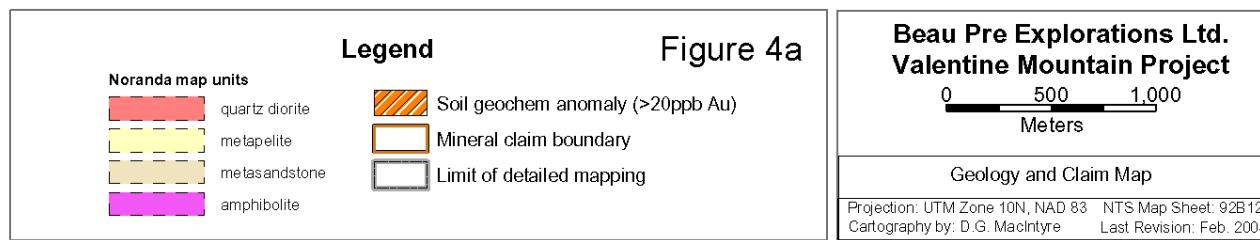

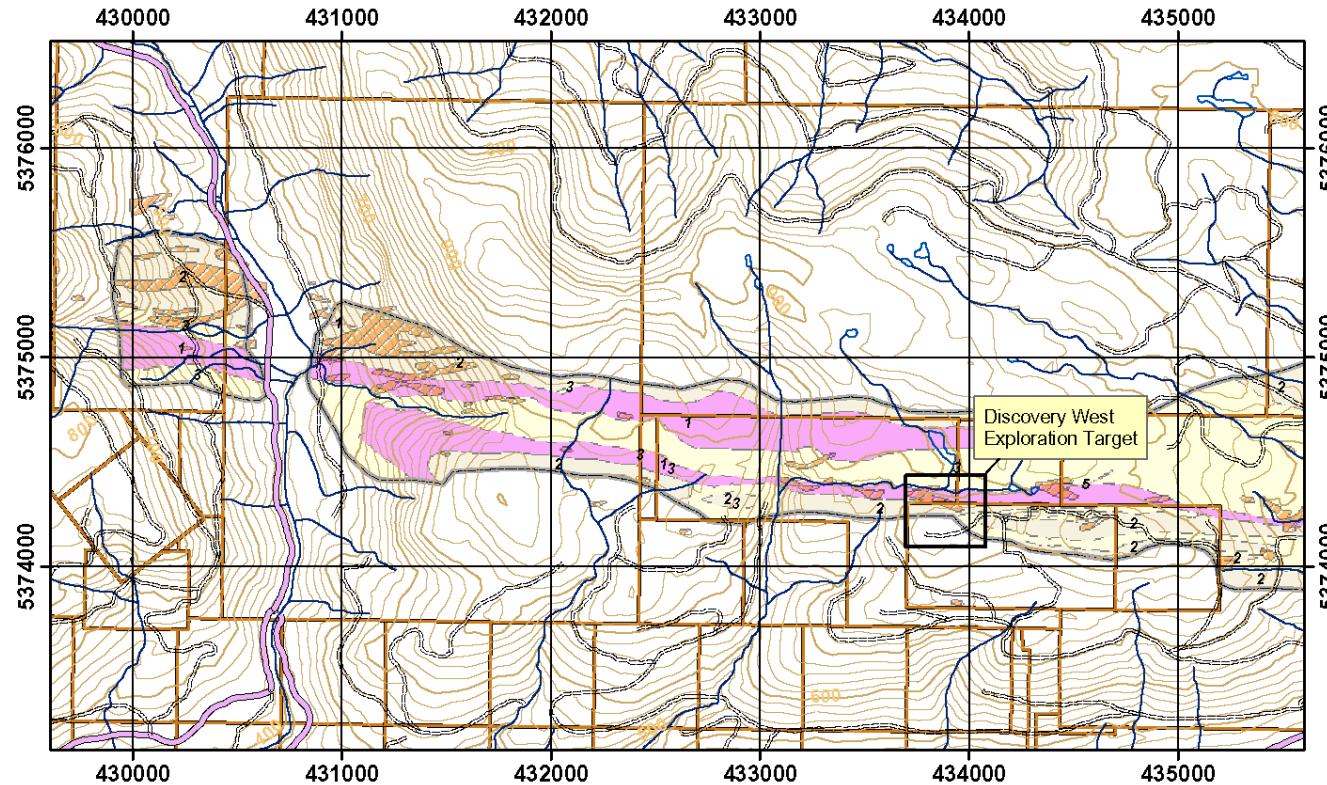

Completed:

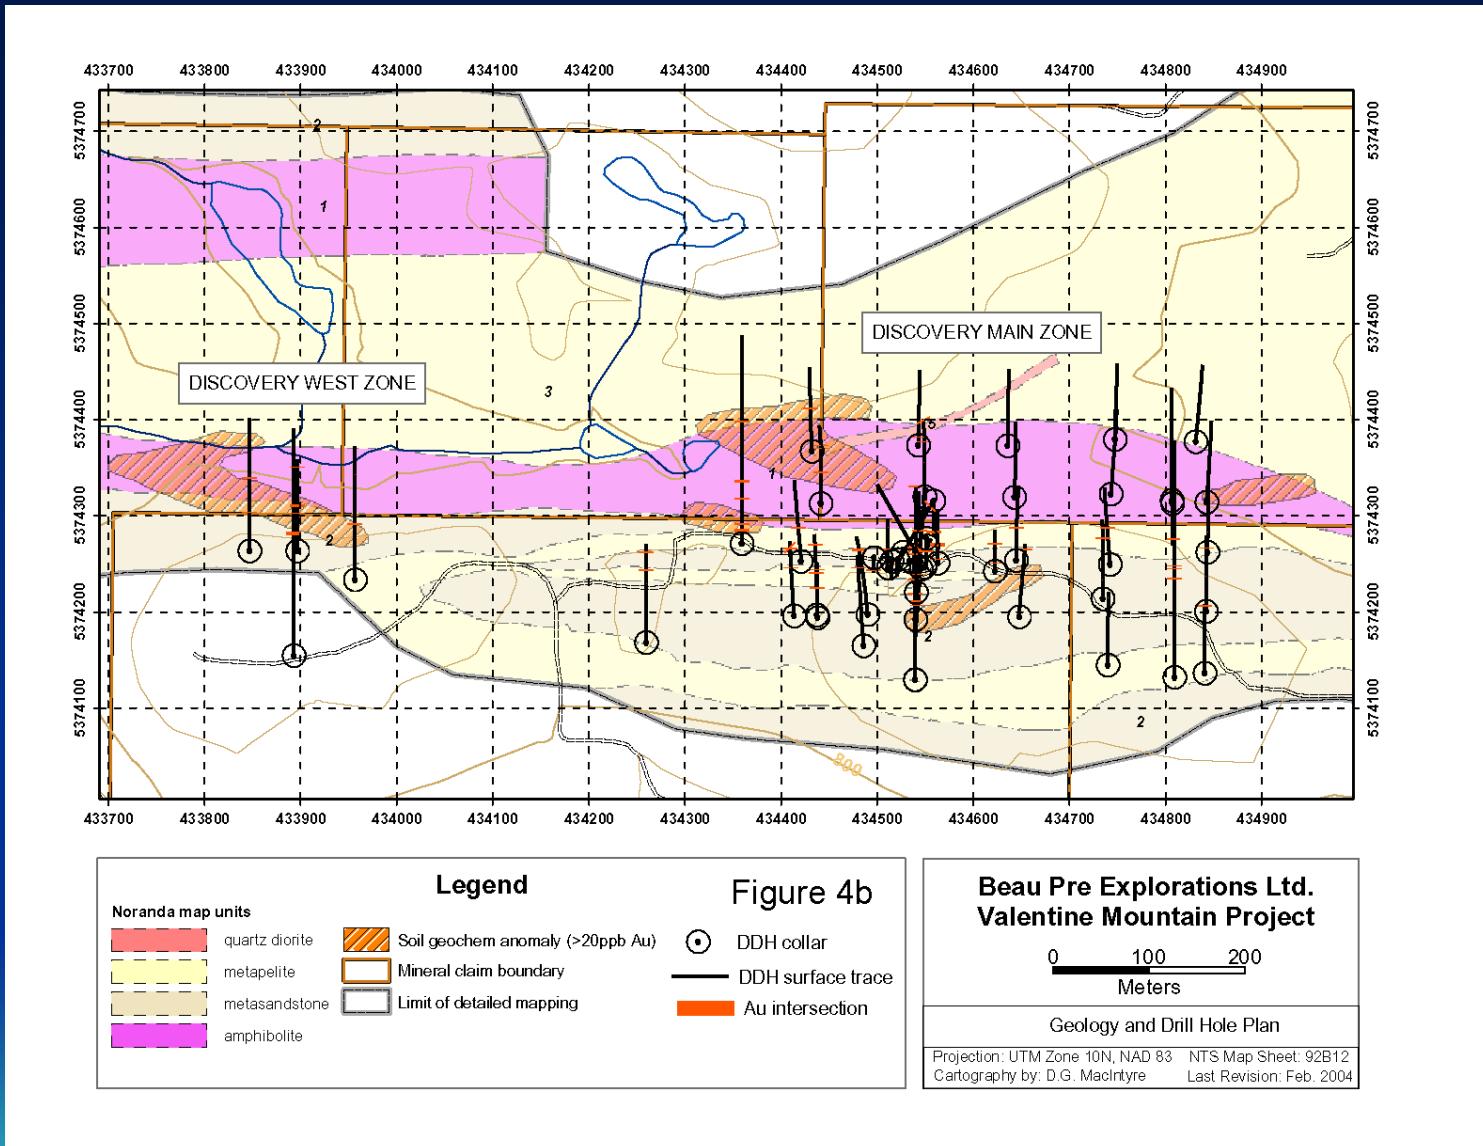

- 73 diamond drill hole highlights in 3D
- Topography, survey data, trenches, geological contacts, soil anomalies

Remaining:

- geophysical anomalies, outcrop mapping, trench mapping, surface sampling
- Interpretation and 3-D modeling

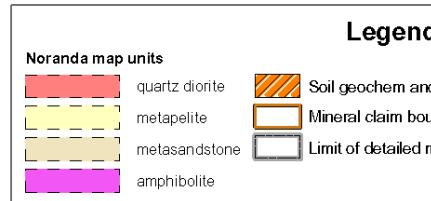

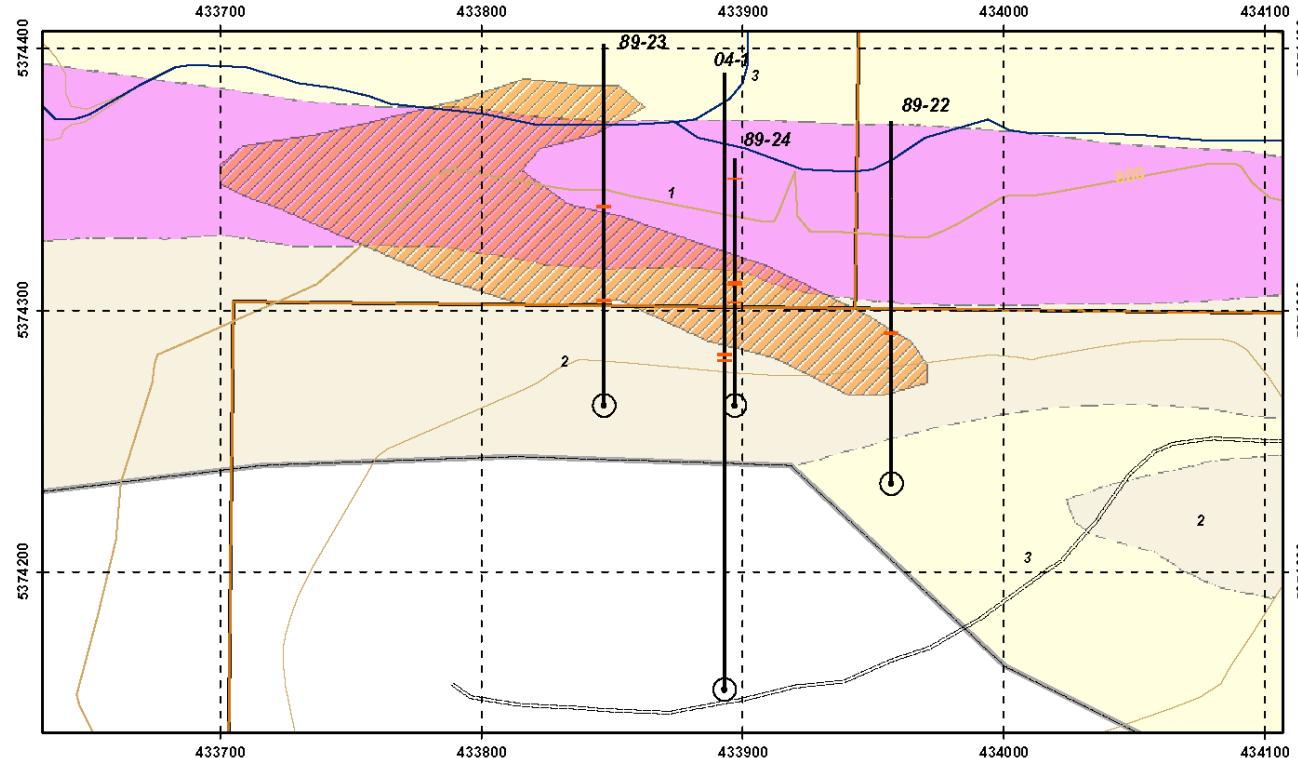

Figure 4c

- DDH collar
- DDH surface trace
- Au intersection

Meters

Discovery West - Drill Hole Plan

Projection: UTM Zone 10N, NAD 83 NTS Map Sheet: 92B12
Cartography by: D.G. MacIntyre Last Revision: Feb. 2004

Discovery West Drilling

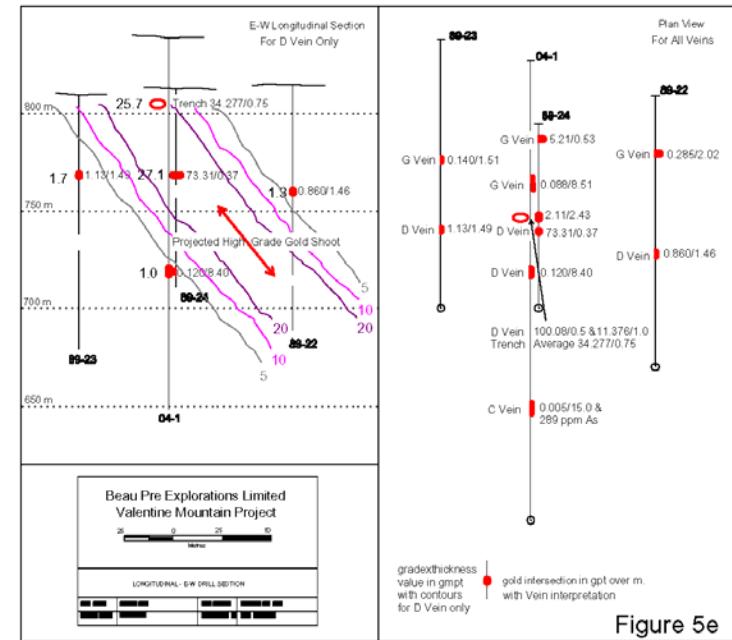

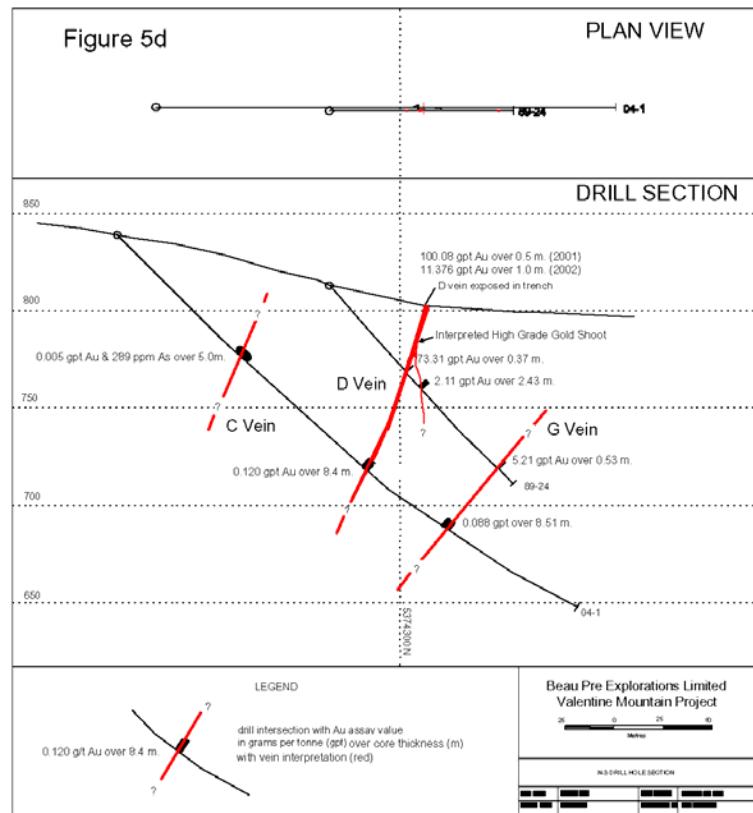

- Successfully completed V-04-01 to test below 89-24 which intersected:
 - D Vein which yielded 0.37 m. @ 73.3 g/t Au at 40 meters below surface, and
 - G Vein which yielded 0.53 m. @ 5.21 g/t Au at 65 meters below surface, and
- Surface trench on D Vein which yielded:
 - 0.5 m. @ 100.08 g/t Au in 2001, and
 - 1.0 m. @ 11.376 g/t Au in 2002

Drilling Highlights

- C Vein - 289 ppm As and 5.1 ppb Au over 15.0 meters at 70 m. below surface
- D Vein - 120 ppb Au over 8.4 m. at -100m.
- G Vein - 88 ppb Au over 8.51 m. at -120m.
- Deep I.P. target - 53.4 ppm As and <5 ppb Au over 9.15 m. in quartz-pyrite at -130m.
- Suggests probable inclined plunge, which may warrant additional drilling

Exploration Objectives

- Continue baseline environmental monitoring
- Complete industry-standard GIS database
- Create predictive 3-D geological model
- Establish Indicated Resources at Discovery Zone to optimize grade control during U/G or surface bulk sampling & test milling on site
- Establish Inferred Resources at Discovery West, Log Dam, or other Targets

Proposed Program

• G.I.S. Modeling	\$ 75,000
• Property Exploration	475,000
• Environmental Monitoring	10,000
• U/G Bulk Sampling	1,849,500
• Processing Plant	537,500
• Scoping Study	50,000
Total	\$2,997,000

Investment Opportunity

1. Established junior company holds large property with excellent infrastructure
2. Long local history and strong project continuity – Bob Beaupre – 27 years
3. Leading area exploration play in a high-potential, under-explored area
4. High quality gold exploration targets during period of commodity price growth
