

Jan. 6 - Adv. O.K. re adv. O.K.

Jan. 7:

801584
Bralorne

Brian Falter re. McElhargney resid.
inquiry.

W.A.B. re. current ddh results.

Chris swung up all lot #5 (4050 prints & changes
& 100 scale mylar & prints) for colouring by
local staff.

Notes to Jan: 24-1, 4.6' @ 0.14

Pending #'s on '51' vein via +28° & +54°
holes from 2600 around - C, recomm. (> 200' sugg)

Drift east on '51' vein @ 25 lev. horizon.
Also - drill drift target on 25 lev @ Decs 20W-25W,
noting 25.9' 92 (incl 8.7% 07) at 22+00W (ddh 25-3).
(perhaps drill above sets more closely before drifting).

PRIORITY RECOMM.

(By virtue of indicated counter-clock (clock E)
swing of '51' vein over its untested easterly
extensions (14-20 levels, incl.) recommend that 1651
E. Drift be extended on vein for 600' - 1000' (OVER)

and, at same time, test both well
for indicated parallel or converging
diverging veins (see core & sludge samples
in vicinity of east end of 20th level.

(B) Extend 2051 E. Dr on vein or indicated
counter-clock swing an isthm 400' - 500'
to the S.G. - (go hard) - S&D. contact.

(C) Test easterly extensions of 20-51
vein by dia. drilling as previously
outlined.

Nov. 6/73

Nov. 6. Bralorne office conference:

extend current drill & tunnel program. It includes target structures outside of Crown shaft interval of 51 vein and east segment of 51 vein between 16 and 20 levels

I - Defined Targets:

- (a) Explore 51 (or 51-H.W.?) structure on 26 lev. east.
- (b) Explore 51 F.W. vein, basically within general F-level horizon.
- (c) Explore 52 vein from 26-level and other workings (77?) in H.W.
- (d) Explore the relatively untested segments of the 77, 77B, 73/75, 93 veins.

II - Wider Geological Targets

- (a) 51-H.W.?) structure above 26-horizon within the east end of the mine.
- (b) Potential new veins within S.E. corner of Bralorne area, in interval of 52-vein.
- (c) Unexplored dip-intervals of 77-vein within east end of the Bralorne mine area.
- (d) N.W. corner of mine area under the Empire fault and its H.W. extension and/or the untested ground in the base of the 77 vein above (and, eventually, below) the 26-level.

W.R.B.: Accurate exploration schedules or estimates pending completion of comprehensive 100-scale composite plans of 8, 14, 20, & 26 levels.
(Note: supp. 40-scale tracings currently in progress)

Nov. 9/73

Capeo to Ed Lea, Mt. Joe Lead.
