

Rod and Bruce have discussed their plans with Dani Aldrick, ~~and~~ Dave Lefebure and company personnel. If the results of this preliminary work are ~~the~~ encouraging, if we are able to fund the study and agreement can be reached with ^{your people} ~~your people~~ ~~Massachusetts~~ and the companies involved, then a larger scale, ~~more~~ systematic survey will be initiated in the summer of 1987. Dani Aldrick's detailed geological work should be complimentary to Bruce's lithochronical studies and it is logical that the two work in close liaison.

Rod Kirkham's past experience in the area should be helpful for orientation of Bruce's, Dani's and Dave Lefebvre's work.

Rod's main ^{continuing} interests in this area are the distributions and interrelationships of ~~precious~~ metals within this precious metal-rich porphyry copper system and the regional controls on the settings of ~~these~~ ^{this} deposits. This work fits into his general project on copper and molybdenum deposits in Canada and helps emphasize the current interest in the precious metal distributions
