

ANDAUREX RESOURCES INC.

ASSAYS FROM DRILL HOLES ON 3 - Seven drill holes have been completed on the Traux gold prop-
 NEW SHOWINGS ARE ENCOURAGING erty in the Bridge River area of B.C. which Andalex Resources
 Inc. hold under option. The program is designed to test 3 new-
 ly discovered showings from which surface sampling assays ranged from 0.20 to 0.50 ounce gold
 per ton over widths varying between 2 and 5 meters. The showings are designated as the north
 zone, the main zone 100 meters to the south and the south zone 1000 meters further south
 Two holes 40 meters apart, angled down at 55 degrees were drilled to test each showing at a
 Hole depth of about 35 meters. Hole No.5 was
 No. Zone Interval Core Length Gold Oz/Ton drilled under No.2 to test the zone at
 1 Main 43.6 m 45.9 m. 2.3 7.5 0.25 an additional depth of 25 meters.
 2 Main 24.7 34.7 10 32.8 0.12 Presenting the assay results, (see
 includes 28.7 32.7 4 13.1 0.24 table) president W.P.Hammond says they
 5 Main 41.2 47.2 6 19.7 0.04 "are considered encouraging, indicating
 3 North 45.1 49.5 4.4 14.4 0.10 a widespread distribution of gold values,
 116 117 1 3.28 0.09 some of which appear to be of economic
 4 North 31.4 37.4 6 19.7 0.03 grade."
 6 South 47.2 48.2 1 3.28 0.25 Drilling continues on the main zone
 7 South 30.1 31.1 1 3.28 0.32 at 40-meter intervals. Further surface
 work is being performed elsewhere on the property where geochemical surveys indicate anomal-
 ous gold concentrations.

HAULTAIN RESOURCES LTD.

DRILL TEST STARTS ON - On the gold property of Haultain Resources in Sudbury district, Ontario,
 ONTARIO GOLD PROPERTY the shaft and underground workings have now been dewatered. The levels
 were mapped and the drift faces sampled by Robert J.Graham, consulting
 geologist, who has reported, "At surface only a few small exposures exist in the shaft area...
 underground the vein often exceeds the drift width and ranges up to an estimated 8-foot true
 width at the bottom (140 ft.) level. The vein is very strong and well mineralized throughout
 its depth.:

Thirty two samples taken underground averaged 0.135 oz. gold per ton. Of these 17 assayed
 between 0.09 and 0.44 oz/ton. On the first level the west face of the vein averages 0.33 oz/
 ton across six feet; at the shaft it assayed 0.14 oz/ton over 6 feet. East face samples by
 Mr.Graham assayed 0.44 oz/ton gold and 5.97% copper over 6 feet. The average grade of 17
 samples taken on the third level is 0.11 oz/ton across 7 feet for 170 feet. Underground devel-
 opment to date conservatively indicates a block 150 x 150 x 6 feet grading 0.14 oz.gold/t or
 1,575 ounces gold, says Mr. Graham. To management's knowledge the area under the third level
 has never been drilled. An initial 4-hole diamond drilling program is now underway. Management
 expects the first hole will be completed by July 31.

- Continued from Page 2 -

TUNDRA MINES LIMITED

Additional ground is being acquired. A 2-mile line has been cut east-west and geophysical
 readings are being taken at 100-foot intervals, 500 feet on either side of the limes.

This property measures 14 miles east-west and 3 1/2 miles north south and will be acquired
 subject to regulatory approval, as part of a new financing in Vancouver. The neighbour to the
 east is Operation Wawa (Murray Pezim et al). Airborne geophysics at 660-foot centres have been
 completed on the Kabenung project's 864 claims and on other of Tundra's Dolson project (350
 claims), Lizar project (564 claims), Doucett property (213 claims), Breckenridge project (101
 claims), Charbonneau project (350 claims) and Copenace project (213)claims). Conductors are
 being plotted and ground follow up work has been in progress for 2 months in Kabenung, Lizar and
 Charbonneau. There are 60 miles of conductive zones within the Kabenunb project.

Project manager is Peter Federber, Val D'Or, Quebec. Project consultants are Fenton Scott,
 P.Eng., Nelson Baker, geologist, Dr. J. Descarreaux.

Product vendors are Don McKinnon & P.Ferderber. Tundra's annual meeting will held on
 29 July at 2:30 p.m. in Hyatt Regency.

TRI BASIN RESOURCES LTD.

INTERNATIONAL CORONA RESOURCES LTD.

BERLE RESOURCES LTD.

GALVESTON PETROLEUM LTD.

GOLD SEARCH STARTS ON OPERATION - Tri Basin Resources Ltd. are participating in the Operation
 WAWA NEAR TUNDRA GOLD DISCOVERY Wawa gold search now underway in NW Ontario. W.S.Irwin,
 president, reports that the initial program is budgeted at
 \$250,000 and includes magnetic and electromagnetic surveys plus ground follow-up. A progress
 report is expected shortly.

Operation Wawa covers 13 townships in the area 10 miles north of Wawa, 100 miles !!! of
 Sault Ste. Marie, Ontario. The projects covers 486 square miles, 311,000 acres. Exploration by
 Tundra Gold Mines Ltd. on property immediately west of the Operation Wawa property has located
 a series of gold showings on surface with good values. Exploration along the common boundary
 will be undertaken.

The property is owned by Algoma Central Railroad who have granted International Corona
 Resources Ltd. an option to earn between 75% and 95% of profits from any mining operation. Tri
 Basin, Berle Resources Ltd. and Galveston Petroleum Ltd. have each acquired the right to earn
 25% of Corona's interest by paying 33-1/3% of the exploration costs.

PARTNER TAKEN ON GOLD PROJECT NOW
BEING EXPLORED AT GOLD BRIDGE, B.C.

Golden Rule Resources Ltd. have entered an agreement whereby Calgary-based Geomex Canada Resources Ltd. may earn up to 50% interest in Golden Rule's Gold Bridge project in increments related to expenditures up to a total of \$300,000 provided for 5 stages of exploration. During the past two field seasons, Golden Rule have explored these wholly owned 8085 acres of mineral claims and reverted crown grants in the Bridge River gold district about 180 km north of Vancouver. The geological environment is favorable for the development of low grade, disseminated gold mineralization resembling that of Carlin-type deposits as well as high grade polymetallic vein deposits. Four targets have been outlined, says Golden Rule president Glen H. Harper. The first targets, the East Taylor Basin Grid, is a 200-300 metres wide zone, coinciding with a 2,000 m long series of geochemical anomalies carrying high in-soils values in gold, arsenic, antimony, zinc, silver and lead. The "A" Grid target is a 200 by 400 m wide zone of geochemically anomalous gold, arsenic, antimony, copper and nickel in-soils values. The Lucky Gem area is a 700 by 800 metres

long zone of anomalous gold, arsenic, antimony, copper and lead in-soils values which is open on strike. Extensive fracturing, silicification, carbonatization and pyritization are present within the anomalous zone. The main workings in the Lucky Gem area consist of two adits near the headwaters of Eldorado Creek. Other workings include ground sluicing near the adits and a number of pits and trenches at higher elevations above the adits. See table for results of previous sampling. Note that the trench and open cuts are in quartz diorite/granodiorite.

In the Lucky Strike area, a vein system is developed at the margins of the porphyry dike which intrudes a quartz-carbonate assemblage. The widths and grades of sections of the vein sampled in the lower Lucky Strike adit are considered potentially economic. Sampling to date has given the values shown in the table.

Mr. Harper says the next exploration program, which is now underway, consists of further geochemical sampling, mapping, and chip sampling in preparation for trenching and drill testing. Magnetic and VLF-EM geophysical surveys will be conducted to define the vein systems and Carlin-type targets.

AMORE GOLD-SILVER ZONES IDENTIFIED

Newmont Mines Limited have been exploring the Toodogoone River gold-silver property of International Shasta Resources Ltd. in northern B.C. since 5Jun83. The purpose of the program is to further delineate a gold-bearing quartz zone in which prior trenching in 1981 exposed good values in gold and silver. See trenches 81-5,7 and 11 in adjoining table. International Shasta's president H.C. Faulkner says drilling and trenching results received from Newmont to date

indicate two zones of mineralization. The Main zone is about 170 feet wide and extends over 1000 ft. in length and is open at both the north and south ends. Additional trenching and drilling results from this Main zone are listed in the rest of the table. Results of the trenching and drilling completed on the second or "New" zone are being tabulated and will be released in due course. Other areas of interest are to be tested. Newmont hold an option to earn 70% interest in the property by spending \$1,500,000 on its exploration. See map over-leaf page 2.

PRYME ENERGY RESOURCES LTD.

MARCH RESOURCES LTD.

INITIAL FIELD WORK ON BIG - Pryme Energy Resources Ltd. and March Resources Ltd. report HEMLO PROPERTY REVIEWED that detailed exploration of their jointly owned 234-claim, 9,360-acre Hemlo property in NW Ontario is being conducted by Noranda Exploration Company to whom they have granted an option to earn 60% interest. The property is known as the Pryme-March "North Block" and is located some 6 miles north of the major Hemlo gold discovery area.

Noranda report that 2 of the preliminary drill holes recently completed were weakly mineralized and assayed a trace of gold with elevated zinc, silver and copper values from several intervals in the mafic volcanics. On other hole intersected stratigraphy similar to that of the "Corona" deposit.

Noranda have advised that July activity will focus on additional geological mapping, soil sampling and magnetic surveys including some re-mapping of areas previously covered. Mapping in June revealed sericitic felsic volcanics at either end of the property similar to those seen in the central position of the property and encountered in drilling. Results of intensive geochemical and magnetic surveys conducted in June are not yet available.

VERONEX RESOURCES LTD.

92 J/14

DRILL RESULTS ON GOLD BRIDGE AREA - Lewis Dillman, president of Veronex Resources Ltd., reports PROPERTY ARE "VERY ENCOURAGING" that 2 months of diamond and percussion drilling have so far been completed on the Howard vein system on the Congress property near Gold Bridge, SW B.C., as directed by R.H.Seraphim, Ph.D., P.Eng.

By agreement, Veronex have made a down payment of \$50,000 and are to spend \$1,000,000 over 3 years to earn 50% interest in the Congress property from Levon Resources Ltd. (formerly New Congress Resources Ltd.). Veronex will earn 5% interest for each \$100,000 spent.

Mr. Dillman says the results of the drilling as reported by Dr.Seraphim are very encouraging: "The diamond drill program to determine size and grade of the Hoardd zone at depth showed that the zone continues with similar geological characteristics to at least 180 meters (591 feet) below the Howard tunnel. The grade of gold in three intercepts was in the range of 0.9 to 0.15 ounce/ton across a meter width.

"Percussion drilling disclosed two shoots: - one averaing 0.47 ounce gold/t across 2.05 meters (6-3/4 ft.) width for 20 meters of length (66 ft.), and the other 0.4 ounce gold/t across 0.63 meters width (2 ft.) for 10 meters length (33 ft.). Also, the faulted offset of the vein suystem was located to the north of previously located mineralization, with holes intercepting 0.178 own across 1.22 meters(4 ft.); 0.309 ounces across 3.66 meters(12 ft.); 0.014 ounces across 1.22 meters(e ft.) and 0.194 ounce across 1.22 meters (4ft.) and 0.194 ounces acros2.44 meters (8 ft.)"

Elsewhere, says Mr.Dillman, geochemical soil sampling and sampling continues on the Junction reef prospect in Washington State.

TABLE MOUNTAIN MINES LIMITED

TAKE OVER OFFERS EXTEND - A.C.Ritchie, president of Table Mountain Mines Limited, has ANNUAL MEETING TO SEPT 15/83 reported that because of the two takeover offers from Erickson Gold Mines Ltd. and United Hearne Resources Ltd. the date of the annual meeting has been extended to Sept.15,1983. A notice will be mailed later. He notes that certain aspects of the Erickson Gold Mines offer have been challenged and that the United Hearne offer expires July 29,1983. The United Hearne offer is one treasury share for each two issued shares of Table Mountain Mines up to 1,718,925 shares of Table Mountain Mines. On June 10,1983, Erickson Gold Mines reported purchase of 1,339,765 shares, or 50.66% of those issued shares of Table Mountain. At May 31,1983, Table Mountain had working capital of \$58,175 and 2,644,500 shares issued. In the eight months ended May 31, 1983 Table Mountain spent \$32,254 mostly on administration, had income of \$6,000 for a loss of \$26,254 for the period.

The claims owned by Table Mountain are in the area of Cassiar, B.C. and cover a portion of the extension of the structures now being mined by Erickson Gold Mines. This property is also close to the property operated by an affiliate of United Hearne, Taurus Resources.

CELEBRITY ENERGY CORP.

STUMP LAKE PROPERTY PROGRAM STARTED - Paul Frigstad, president of Celebrity Energy Corp. has reported that work has started on the Stump Lake property located 40 km north of Merritt, B.C. Work is to include dewatering of the underground workings, geophysical and geochemical surveys as well as diamond drilling from underground. Systematic sampling of the ore and waste dump on the property will also be undertaken. Grab samples from this dump have returned good grade values in gold, silver, lead and zinc.

STATESIDE ENERGY CORPORATION

SECOND PHASE EXPLORATION - Stateside Energy Corporation has reported that a \$100,000 second PROGRAM STARTED ON CRYSTAL phase exploration has started on 28,000-acre Crystal Creek CREEK PROSPECT NEAR GOLDEN prospect located surrounding the Ruth Vermont mine, 50 miles south of Golden, B.C. The program is to include S.P. surveys and 2,500 feet of diamond drilling. Stateside Energy Corp. has a 9 3/8% interest in the consortium exploring the property. Several S.P. anomalies were located on the property in the 1982 field season. (S.P. = self potential).

COLUMBIAN NORTHLAND EXPLORATION LTD.

LOSS REDUCED. CONTINUED - H.Brodie Hicks, president, reports that revenue of Columbian Northland Exploration Ltd. in their fiscal year's second quarter ended 31Jan83 was \$601,827. The company incurred a loss, after tax benefit, of \$19,934. The equivalent figures for the first 6 months of the fiscal year are revenues of \$953,897 and loss, after tax benefit, of \$1,091,552. Loss per share for the 6 months was 10¢. Included in the loss was a charge of \$800,000 following a decision to abandon certain undeveloped mining properties.

Columbian's principal asset is an interest in a gold mine in B.C. which started commercial production in July 1982. Mr. Hicks reports that environmental and metallurgical problems delayed achievement of the anticipated degree of profitability. He says these problems, however, are being resolved and the outlook for the rest of the year is for continued improvement in financial results.

VERONEX RESOURCES LTD. NTSLEVON RESOURCES LTD. 925/14

CONGRESS GOLD PROPERTY - Veronex Resources has announced that two drilling programs have DRILL PROGRAM RESUMED commenced on the Congress property near Bridge River, B.C. Percussion drilling underground is underway on a bulk sampling program. The first of three deep holes from surface has been spudded to test the extension of the gold bearing zones at depth. These two drilling programs are under the direction of R.H.Scraphim, Ph.D., P.Eng.

This property, which is a joint venture between Veronex Resources Ltd. and Levon Resources Ltd., is within seven miles of the famous Bralorne Mine. Dr.Scraphim states, "The possibility of existence at depth of quartz veins within a larger intrusive such as at Bralorne should be tested."

MARCH RESOURCES LTD.

HEMLO DRILL PROGRAM - March Resources and Pryme Energy Resources Ltd.have been advised that TO START MAY 1,1983 Moranda Exploration Company, Limited will commence May 1,1983 an extensive drill program on the companies' large 234 claim "north block" in northern Ontario's Hemlo gold camp.

A comprehensive report detailing results of several months of surface exploration is being prepared and will be submitted by April 15. The program included more than 20 kilometers of linecutting and induced polarization and magnetic surveys.

DORADO RESOURCES LTD. NTSVAT PETROLEUM LIMITED

OKANOGAN SILVER GOLD - Dorado Resources Ltd. and Vat Petroleum Limited have jointly acquired PROPERTY OPTIONED an option to purchase a former high-grade silver and gold producing property in Okanogan county, in north central Washington, U.S.A. The patented Ivanhoe claims yielded carload ore shipments in 1892 averaging over 300 ounces of silver per ton and other reports from that era suggest gold also was produced from sorted ore with assays in the one ounce per ton range. The properties have seen little exploration since the turn of the century. The Dorado and Vat option until June 30 requires payment to the vendors of \$1,000 per month with a three month extension available at \$2,000 per month. The companies can acquire the properties for staged payments totalling \$140,000 plus 120,000 common shares each of Dorado and Vat. On acquisition, they will be required to spend \$50,000 and \$75,000 respectively, in the first two years of property development.

Dorado Resources has reported "very encouraging" gold and to a lesser extent, silver and tungsten mineralization in two test holes drilled on the Tillicum Mountain property near Nakusp, B.C. Split-core samples at 130 feet of depth assayed gold at rates ranging between 0.106 and 0.014 ounce per ton. Silver content was assayed between 0.20 and 0.10 ounce per ton. Lesser gold and silver concentrations were found in another zone at approximately 290 feet of depth. Rolf Gartman, Dorado president, said, "We are very encouraged by the test results. Our original objective had been to drill to at least 1,100 feet to test a large geochemical anomaly, but an underground fault zone was encountered in both holes at a depth of approximately 600 feet, and our objective was not reached. The zone around 1,100 feet remains as our primary objective, but our targets have been broadened to include two and possibly three zones." Further drilling is planned for April.

UNITED WESTLAND RESOURCES LTD.

THREE PROPERTIES OPTIONED - United Westland Resources Ltd. has acquired an option to purchase three mineral properties in Ontario as follows: a 100% interest in 35 mineral claims located in the Hemlo area of Ontario. The purchase price, on an option basis, is \$92,500 and 50,000 treasury shares to be issued over three years; a 50% interest in 50 mineral claims in the Sturgeon Lake area of Ontario in consideration for 40,000 treasury shares of United Westland. The other 50% interest is being acquired by Canamex Industries Ltd. which has agreed to pay \$50,000 cash to the vendors of the claims and incur the first \$30,000 of exploration costs, following which exploration costs will be shared on a 50-50 basis with United Westland; and a 50% interest in 71 claims in the Terrace Bay area of Ontario in consideration for 55,000 treasury shares of United Westland. The other 50% interest is being acquired by Ascona Petroleum Ltd. which has agreed to pay \$71,000 to the vendors and incur the first \$41,000 in exploration costs, following which exploration costs will be shared on a 50-50 basis with United Westland.

FOR THE RECORD

Warrior Resources Ltd. share trading suspension order was rescinded by B.C.Sup't. of Brokers on 31Mar83. Warrior shares were reinstated for trading on Vancouver Stock Exchange on 4Mar83.
