

Aug. 13/87

Harold:

Enclosed are ~~7~~⁷ revised X-sections plus one (L16E) new X-section, the latter showing a proposed D.D.H. #KK 81-10 to test a gold-bearing zone.

Samples from D.D.H. #KK 81-1 will be analysed for Au and every 3rd one for Ag, or else get the lab to test for Ag on ones which show appreciable gold.

Sample from the Copper zone will be assayed for Cu and Au initially, and for Ag on Cu high ones. We will wait for your examination of the drill core and the estimates of copper content to determine the final assaying procedures.

Regards.

Fred Clark
