NORANDA PORPHYRY CU-AU PROSPECTS - MT. MILLIGAN AREA, B.C.

Bob Cluff, Noranda, Prince George, has provided some initial information over the phone re additional properties that may be available for participation. All would involve 1991 expenditures of about \$150,000. These are listed in order of priority and shown on attached map but I would caution that I have not looked at any data on these.

KL - immediately north of Kookaburra's COL property, now being funded by Asarco. The KL features a large copper in soils anomaly with some coincident gold values. I believe this property covers an old showing with shallow shafts and gold-bearing quartz veins that were looked at in the 1940's by Cominco and the MacMillan interests of Toronto. This property according to Cluff could generate immediate news.

TSIL - Noranda drilled 3 holes here which indicated propylitic alteration - more IP and geochemistry is planned.

PM - this property covers Mt. Milligan type aeromagnetic and resistivity signatures and has gold, copper and molybdenum geochemical signatures.

The TSIL and PM properties are on roads - The KL is close to existing logging roads on the COL property but may require some helicopter access. A contract helicopter will be based 25 km away.
