✓ Traverse: Tunjony h. east to camp.

Weather: Sunny with cloudy periods.

Summary:

Today I traversed from Tunjony lake to camp. Silt sampling was poor on the river so samples were taken at all streams that fed into the river. The river was totally

inaccessible for about 2 miles due to a steep canyon. Terrain was very difficult with a great deal of underbrush. Two rocky outcrops were encountered. The first one was at the start of the river and was about 10m across. The second was about 250m west of camp and it was about 30m across. I took nine silt samples today in all and the traverse was about 5mi long.

Notes.

June 5/81 Summary S. Goetz

Today I traversed from Tunjony L. to camp. Silt sampling was poor on the river so samples were taken at all streams that fed into the river. The river was totally inaccessible for about 2 miles<sup>3</sup> due to a steep canyon. Terrain was very difficult with a great deal of underbrush. Two rocky outcrops were encountered. The first was at the start of the river and was about 10m across. The second was about 250m west of camp and was about 30m across. The traverse was about 5mi. long.

For notes on my samples see Doug Madson's notes for June 5/81.
