Note: SGTI-84 was taken on the bank of B.S.J. Cree.
No silt was available under water due to velocity of creek. Silt was probably deposited during spring runoff.

Summary

Mike Thicke and I were dropped off at the upper end of B.S.J. Cr. We followed the creek N.W. for about 6 mi. taking soils and silts whenever possible. At the N.W. end of the traverse, samples were taken every 300m because I was following the base of a ridge. The terrain was very steep in that area. Weather was very good today. Saw seven mountain goats at the start of our traverse.
