

TZ#3

July 22

842727

Inklin Traverse.

Creek flowing north
into Inklin.

SNAPPER CK.

TZ2T1-9

Float, probably vein.
Highly silicified sandstone.
80% quartz. No visible
sulphides

TZ2T1-10

Float. Well Rounded.
Conglomerate. Hard, silicified
Fragments appear as quartz
chert. Rock at creek mouth
appear more silicified

Traverse with R. Hazen by
through burned side of
Creek Our plan was to
bank float up the
creek. This was not
possible to due for 80%
of travers. Cliffs &
deep water, vegetation
prevented us from being
by the creek very often
Possible best outcrop
was in cliffs in canyon
so was not seen or
sampled. Trav ended in
last known pick up spot
seen from chopper. Best
float just as rounded
upstream as creek mouth
no exciting outcrop occurred.
Bear provided highlight of
day -
