

TGS - BRAZOR

# BP BRALORNE PIONEER GOLD MINES LTD.

The company owns 100% of the historic Bralorne Gold Mine, which was the largest single producer of Gold in B.C. up until 1971, having produced a total of 4.1 million ounces of gold from 7.9 million tons of ore averaging 0.52 ounces per ton during the period of 1897-1971.

We have discovered extensions to the original Bralorne vein system on the adjoining "Loco" property. The Loco property lies to the North of the Bralorne mine and is separated by a major fault, which has displaced the new veins by some 1200ft.

The new discovery suggests the substantial gold reserves are possible further exploration is being planned for 2003. The Bralorne mine is fully permitted and has a mill that is 70% completed, all equipment to complete the mill is on site. The reserves at present are approximately one million tons of 0.3 opt. The new discoveries should increase these reserves, but more exploration and development is required.

The company has recently completed several financings to fund exploration.
