

HIXON GOLD 936-013, 014, 015

884037

HIXON ck.

Wed. July 4/01

- Le Wayne Musslewhite Sunny 28°C

- placer + lode

(with Bob Lang)

MI-936-054

- no 'activity' - gate

- hematite + muscovite - rich 'mud' layer on top of paystreak

Photo

- host rocks (cobbles/boulders) in placer = 'greenstone', Niver 'granite' + aplite + pegmatite; smoky (grey) qtz; biotite schist (Barkerville terrane); white qtz (+vg); qtz. bx.

→ some 'good' placer gold recovered

Potential Problems - removing 'pink' 'mud' away from bank and Hixon Creek, to get at paystreak

Alex Birden } financial
Alex Burton } cons. ← lode
 } geol. in (not placers)

LEVEL (S) [Quesnel Quartz Mine - lode Au downstream]
