

JAVA [New Minfile?]

On July 25, 1996 Bob Lane and I very briefly visited Dave Fleming, Kennco, at his Tatelkuz Lake camp. He had just completed further mapping and sampling on this new (1995) intrusion-hosted prospect, located west of the CH porphyry prospect. Quartz stockwork veins with molybdenite + pyrite + minor chalcopyrite and arsenopyrite, plus anomalous gold occur within the granodiorite and also in the surrounding volcanic rocks. [Note: a proposed drilling program was recently cancelled due to corporate cutbacks. Dave feels Kennco may not persue this project; nevertheless, he is still very keen on it].

June '98: Dave Fleming (ex-Kennco) still very interested in property, but doesn't think Kennco would sell or option it to him (?).  
 Implications regionally? eg. Copley Lk. (Anuk'i) <sup>to north;</sup>  
 CH (to east)?
