Osborne					9,441	1.5	14,246	458
South Pipeline					10,044	5.5	54,750	1,760
The Corporation's share							484,557	15,577

(The resources shown are in addition to the ore reserves)

Definitions

The Corporation's ore reserves and measured and indicated resources are calculated at December 31, 1993. Relevant assessment criteria have been used to determine the appropriate category of ore reserve and identified mineral resource for all data and tables.

A **resource** is a mineral deposit that may eventually be economically and legally extracted.

A **measured resource** is a resource for which a quantity is computed from dimensions revealed in outcrops, trenches, workings or drill holes; grade and/or quality are computed from the result of detailed sampling. The sites for inspection, sampling and measurement are spaced so closely and the geological character is so well defined that size, shape, depth, and mineral content of the resource are well established.

An **indicated resource** is a resource for which quantity and grade and/or quality are computed from information similar to that used for measured resources, but the sites for inspection, sampling and measurement are further apart or otherwise less adequately spaced. The degree of assurance, although lower than that of measured resources, is high enough to assume geological continuity between points of observation.

An **ore reserve** is that part of a mineral deposit which could be economically and legally extracted or produced at the time of the reserve determination.

A **proven reserve** is that part of a measured resource that could be economically and legally extracted.

A **probable reserve** is that part of an indicated resource that could be economically and legally extracted.
