

LARA

Apr. 5/94

- chat with John Watkins who stated
that Richard Walker was working
on the LARA property (for Karamide?)
+ that he was "very excited" about
it.

LARA

- MT. SICKER (Type-Lenora)

Oct. 16/89

Gary Wells: ^(MT. SICKER)
Lenora-Type: 305,000 tons 3.3% Cu 7.5% Zn
 (produced) 13% Au 2.75% Ag

Lenora-Type Ba-Zn-rich ms in argillite horizon between
 alt'd felsic ashes, crystal tuffs. (cf. Eskay Ck.?)

- some very high grade ~~zones~~ zones

Eq. 6.5% Cu, 20g Au, 160g Ag, 14% Zn
 - well bedded plus barite.

Note: Past production does not reflect zinc cont.
 (i.e. not recovered)

LARA

- some good photos from u/g
 (unfortunately - all u/g flooded now)

- high Zn (light coloured) = higher gold values (+Ag)
 (à la Eskay Ck.?)

- 80% of Minnava drilling on Coronation Zone - still
 a little short of an economic ore reserve

However, - excellent potential elsewhere
 on property (i.e. in Hanging Wall 'sequence')
 q. Randy zone

- No obvious alt'n zone assoc. with Coronation Zone
 (i.e. not close to source).

- tetrahedrite in later qtz. veins in Coronation Zone.
