

VIDETTE AREA

June 26/86

Sunny 30°C

- all DG's (except George, Dave G.)

- Gnome cls. - Noranda drilled on Chevron's option - silica in shear zones with clays

Mike Dickens - prospector from Savona
- reibe kite + on + fib
- in clayey material by Deadman
up to .6 oz/ft Au, Cu
→ listwanite on other side of ck.

92P 889359
086

Yard cls. (no) ↑ Eocene? early Jurassic?
Gnome (N) (Chevron-Noranda)
Epi (no) epithemal gte

Yard cls flourite - barite

photo - Looking southerly over GNOME cls
Photo - Gnome prop. - silica } from where Noranda just drilled 2 holes

Host - Nicola
arg.ite ands. One > 1000ft - missed system

Mike Dickens has spent 3 yrs.
trying to assemble ground.

- traverse onto Fpl cfs, &
into 'gorge' - E-W structural
control - on south side of
Deadman Cr. = alt d + box
volcs lying below Miocene
lavas - lab. gtz (some
chalcedony + vugs) - geochem
returns eq. 400 ppm As,
150 ppb Au

Precisely claim - interesting!

Horanda did property exam
- Gavin Dizon, Rob Wilson, Bill Mercer,
Glen ?

COMMENT: looks like silica
- 'cap' (à la Alberts Dump)
- without alunite
- sulphides - py + tr. arsenopy
