## INT'L. WAYSIDE GOLD MINES LTD.

[TWA-V] 26,853,013 SHS.

BC VEIN DRILLING CONTINUES - J. Frank Callaghan, president,  
has reported International  
Wayside Gold Mines Ltd. has completed 29 surface diamond drill  
holes on the BC Vein portion of the Cariboo Gold Project at Wells,  
B.C.

Assays results are pending on eight drill holes.

Five diamond drill holes BC99-10, 11, 12, 14, 15, have been  
completed from the setup 540 feet south of the BC shaft. The drill  
holes were designed to test the BC Vein at 100-foot intervals along  
strike. On completion of the initial drill holes in this area and  
pending assay results, the drill rig was moved to the American  
Extension where 3 diamond drill holes were also completed  
(BC99-13,16,17) and assay results are also pending.

A fill in drill hole has been started in the 120 foot gap between  
BC98-09 (20ft. of 12.94 g/t gold) and BC99-08 (24ft. of 10g/t gold)  
this will be achieved with drill hole BC99-18. The existence of this  
gap became apparent in the recently completed transit survey.  
Results of this hole are necessary before completing the mineral  
inventory for the section west of the BC Shaft. (SEE LONG  
SECTION MAP OVERLEAF P.4)

In addition a drill setup is being prepared south of the 19,000  
easting grid line for drill holes BC99-19, 20, 21 to follow up on drill  
hole BC98-02 where several intercepts had values of 8.44 g/t to  
51.09 g/t gold.
