## MISTY MOUNTAIN GOLD LTD.

[MGL-T; MGLCF-NASD-OTC-BB] 9,561,989 SHS.

NET PROFIT INTEREST ACQUIRED/- Robert G. Hunter, chairman  
ANOTHER GOLD ZONE DISCOVERED reports Misty Mountain  
Gold Ltd. has completed the  
acquisition of 100% of the outstanding shares of Harmony  
Exploration Ltd. All conditions of Misty's offer were met and the  
company has issued 1,417,227 shares to the former owners of  
Harmony Exploration Ltd., which is now a 100% subsidiary of  
Misty. Harmony Exploration Ltd. had controlled a 10% net profit's  
interest in the Harmony Gold Project through the recent expenditure  
of about \$1,000,000 on the project which is located on Graham  
Island, one of the Queen Charlotte Islands about 50 miles off the  
northwest BC coast. With the completion of this acquisition  
transaction, Misty Mountain Gold now owns a 100% interest in the  
Harmony Gold Project with no underlying interests whatsoever.

At the Harmony gold property, the claims cover an epithermal  
gold system including the Specogna deposit, which has a mineral  
resource containing 3,130,000 ounces of gold. The company is  
examining mine development options for the Specogna deposit;  
pursuing exploration targets outside the deposit area and has targeted  
1999 to complete a major transaction with a mine operating  
company.

The recent four hole, 575 metre diamond drilling program,  
targeted north of the Specogna deposit, along the northern  
extension of the Sandspit Fault, has discovered a potentially  
significant new zone of high grade gold mineralization (SEE DRILL  
HOLE PLAN OVERLEAF P.3). The zone was intercepted by hole 154  
in the Sandspit Fault. Hole 154 intersected 9.98 metres (32.7 feet)  
grading 10.07 grams gold/tonne (0.29 oz/ton). The intersection is  
at a vertical depth below surface of about 60 metres, some 270 metres  
north of the Specogna deposit. This zone is open to the north and to  
depth and has the potential to add new high grade resources to the  
project. The high grade epithermal gold mineralization is hosted by  
the same dacite dyke that forms the footwall to the Specogna  
deposit. (SEE GCNL NO.16, 25Jan99, P.5 FOR PREVIOUS  
HARMONY GOLD PROJECT INFORMATION)
