Reliable Reporting

NO.246(1987)
DECEMBER 23, 1987

WESTAR RESOURCES INC.(WTR-V)
MANHATTAN MINERAL CORP.

HOLE	FOOTAGE	LENGTH	OZ. SILVER/T	OZ. GOLD/T
87- 5	140-145	5	0.30	0.122
87-17	260-265	5	.17	.306
87-18	220-240	20	.08	.097
87- 7	135-140	5	.75	.090
87- 8	65- 85	15	3.47	.93
also	125-130	5	.41	.151
87- 9	165-175	10	.24	.69
87-12	105-110	5	.32	.122
	115-120	5	.75	.223
	135-155	20	2.10	.15
also	160-170	10	.99	.10
87-14	50- 55	5	.72	.376
	70- 75	5	.31	.100
	130-135	5	.41	.151
	360-365	5	1.56	.091

BRALORNE AREA DRILL - Warstar Resources Inc. and
HOLE ASSAYS REPORTED Manhattan Mineral Corp. have
reported results from a recently
completed reverse circulation drilling program on the
Golden Sidewalk claims in the Gold Bridge area of B.C.
Manhattan Mineral Corp. has the right to earn a 50%
interest in the project by spending \$500,000 by
September 30, 1990. The properties adjoin
Levon-Veronex's Congress property to the north.
Twenty-two holes totalling 7,305 feet were drilled to
explore the Alpha and Beta Zones, and the Peerless and
Dauntless veins. The drilling did not improve the
overall grade of the Alpha zone. Assay values obtained
from the Peerless and Dauntless veins were also
substantially below ore grade. The major intersections
obtained from the Beta zone are in table above.

SUMAC VENTURES INC.(SSV-V)

SUMAC ACQUIRES 700,000 MORE - Sumac Ventures Inc. has
TONS OF HEAP LEACH MATERIAL agreement in principle
to process 2 piles of
gold bearing tailings in the valley above Hedley, B.C.;
that total about 700,000 tons. Initial sampling indic-
ates the gold content to be close to 35,000 ounces; bulk
samples have been delivered for metallurgical testing.
The agreements require Sumac to issue 375,000 shares at
intervals over the expected term of operation plus a 4%
royalty on one of the piles. Documentation for present-
ation to the vendors and the regulatory bodies is
underway.

Elsewhere, Sumac plans to continue it's successful
heap leach operation at the Old Union mine, 45 miles
north of Grand Forks, B.C., in the early spring of 1988.

HULDRA SILVER INC.(HDA-V)

UNDERGROUND CHANNEL SAMPLES - Huldra Silver Inc.
CONFIRM GOOD SILVER VALUES president Magnus Bratlien
has reported underground
exploration on the No.1 level on the Treasure Mountain
property, 27 km east of Hope, B.C., has been concluded
for the present. The C Vein was intersected at 88m from
the portal and then followed for the next 207 m. Channel
sampling of the vein at 1 m intervals returned ore grades
over a length of 149 m (3 separate ore shoots) across an
average width of 1.1m, fully diluted to 1m. Grades are
as follows: 30 oz.silver/t, 10.2% lead, 4.7% zinc.
From sampling in 1986, indicated ore reserves on
the C Vein between Level 1 and the surface, a vein dip
length of 55 meters, are approximately 36,000 tons,
assuming a specific gravity of 4. The face of the drift
is in ore indicating reserves will be expanded when
drifting resumes in 1988.

Slashing of an earlier cross-cut, called the No.2
level, has now advanced this level a distance of about
148 m from the portal. From this point a drift will be
driven some 150 m in an easterly direction to intersect
the C Vein which will then be explored and developed.

Level 2 lies about 137 m of vein dip length below
Level 1. Successful exploration of Level 2 will there-
fore substantially increase indicated and potential ore
reserves.

Work is suspended during holidays but will resume
on 5Jan88. Contractor is A.J. Beaton Mining Ltd.
Financing of the development work is in place. CNP
Funds of Montreal have committed \$1,250,000 to the
company through the purchase of flow-through shares at
the following rates: \$300,000 at \$2.645 per share
(received) \$950,000 at \$2.335 per share (\$400,000
received to date). When this financing is completed
there will be 3,259,466 shares issued. (SEE GCNL No.216
and No.190 for much detail)
