

### INTERNATIONAL RHODES RESOURCES LTD.(IRH-V)

**UNDERGROUND EXPLORATION** - International Rhodes Resources NOW BEING PLANNED Ltd. has reported additional assay results from a recently completed diamond drilling program on the South zone of the Dominion Creek property, located 27 miles northeast of Wells, B.C. Fifteen holes were completed, testing results from stripping and trenching by operator Noranda Exploration Company, Ltd. (SEE GCNL NO.183 P.2 FOR PREVIOUS DRILL HOLE ASSAY RESULTS)

Gold mineralization has been found in three east-west trending and one north-south trending vein structures on the South zone. Drilling was concentrated on the east-west 2B structure. The 2B structure has assayed up to 0.936 oz.gold/ton and 4.27 oz.silver/ton over 7.9 feet on surface. It has now been traced by drilling over a strike length of at least 300 feet. Drill assays of this structure area, from east to west:

HOLE	INTERVAL FEET	WIDTH FEET	OZ.GOLD/T
21	46.2 - 50.5	4.3	1.29
12	137.9 - 149.2	11.3	.079
13	157.1 - 171.9	14.8	.450
including	159.4 - 160.4	1.0	.911
	165.0 - 168.6	3.6	1.44
16	9.2 - 41.8	32.6	.305
including	28.0 - 29.8	1.8	1.11
	29.8 - 30.8	1.0	.668
	34.9 - 36.0	1.1	1.27
	37.4 - 38.5	1.1	.795
23	82.7 - 92.5	9.8	.154
including	82.7 - 86.0	3.3	.254

The 3B structure lies approximately 70 feet south of the 2B structure. Surface channel sampling has yielded results of up to 0.93 oz.gold/ton over 14.4 feet. Two holes drilled into this mineralization returned the following assays.

HOLE	INTERVAL FEET	WIDTH FEET	OZ.GOLD/T
12	54.0 - 60.4	6.4	0.113
including	58.1 - 60.4	2.3	.214
13	74.5 - 95.9	21.4	.722
including	82.0 - 89.3	7.3	1.85

Two other structures, the east-west 1B structure and the north-south 2A structure, have also returned excellent assay results. Trenching on the 1B structure, some 130 feet south of the 2B structure, has assayed up to 0.80 oz.gold/ton over 2.1 feet and .28 oz.gold/ton over 2.0 feet. Drilling by Noranda early in 1987 partially tested the 2A structure, returning an intersection of 31.5 feet of 0.20 ounces gold per ton.

Because of these highly encouraging results, an accelerated exploration program, including underground development, is being planned to further test the South zone. International Rhodes has an option to earn a 38.5% interest in the property by spending \$1,385,000 on exploration by 31Dec, 1989.

### WESTMIN RESOURCES LIMITED(WMI-V,T,M)

	415.5 - 417.7	2.2	0.280
	457.1 - 460.4	3.3	0.123
DM70	252.8 - 254.4	1.6	0.122
	438.2 - 441.5	3.3	0.199
	465.2 - 466.8	1.6	0.216
DM83	316.6 - 319.9	3.3	0.330
DM91	291.0 - 295.6	4.6	1.31

PUNDATA GOLD CORPORATION(PUN-Alberta)

FURTHER INTERESTING GOLD ASSAYS REPORTED - J.S.Bending,  
FROM SPANISH MOUNTAIN PROJECT. president of  
Pundata Gold  
Corporation, has reported results from the continuing  
exploration of the 60% owned CPW - Spanish Mountain  
property near Likely, B.C.

Assays have been received on 5 further diamond  
drill holes. (SEE TABLE OVERLEAF). Visible gold has  
been identified in three separate drill holes now in for  
assay with results to be released when available.

Evaluation of outlying areas of the large claim block  
continues with grab samples from recent trenching activi-  
ty returning assays up to 0.668 oz.gold/ton. Pundata has  
added four new 100% owned claim blocks to its property.

Regional exploration and trenching on outlying  
areas will continue until snowfall. Diamond drilling  
will continue into the late fall or early winter.  
Winter conditions should provide few problems for  
continued exploration because of the excellent  
infrastructure in the area and the ease of access to the  
property by two mainline logging roads. Additional  
results will be released when available.
