## MAX MINERALS INC. (MXS-V)

HOLE	SAMPLE NO.	INTERVAL	FOOTAGE	OZ. GOLD/T
87-8	8A	114.0-116	2.0	0.320
"	8C	116.0-116.8	0.8	.020
"	8C	116.8-117.8	1.0	.070
"	8D	117.8-119.3	1.5	.962
"	8E-B	119.3-120.0	.7	.216

ASSAYS FROM HOLE 8 REPORTED - C.Dyakowski, president, reports that Max Minerals Inc. has completed its drilling program on the Athelstan-Jackpot property in Greenwood mining division in south central B.C. and has thereby earned 65% undivided interest in it from RIMACAN RESOURCES LTD. Thirteen holes were drilled, totalling 1482 feet. Of the 35 core samples taken, 16 are anomalous in gold. The most significant are shown in the table. The weighted average of the 6-foot interval from 114 to 120 feet in Hole 87-8 is 0.384 oz.gold/t.

## DUKE MINERALS LTD. (DKM-V)

WORK ON 2 B.C. GOLD - David H. Brett, managing director PROSPECTS OUTLINED of Duke Minerals Ltd., announces encouraging progress on claims near the high grade Cusac/Erickson gold mine at Cassiar in NW B.C. Soil sampling reconnaissance showed anomalous gold values over a wide area. Quartz veins discovered in that area have been further exposed by back hoe trenching. Above the highest anomaly (670 ppb gold) trenching encountered a silicious, highly pyritized structure over 15 feet wide. Additional trenches traced the zone for over 150 feet on surface. Assays are awaited from this zone and other structures on the property. Duke can earn 51% interest in the claims from GULE TITANIUM LTD. (GUT-V) by spending \$180,000 by 31Dec88.

Elsewhere, Duke has started drilling at least 2,000 feet on their claims in the Toodoggone River district of north central B.C.

## TOTAL ERICKSON RESOURCES LTD. (TLE-V,T)

ADDITIONAL GOLD VEINS - Total Erickson Resources Ltd. NEAR CASSIAR ACQUIRED has optioned the 32-claim Hunter gold property from CONSOLIDATED SILVER STANDARD MINES LIMITED (CDS-V). The property is located 6 miles west of the Erickson gold mine near Cassiar in northern B.C. The option calls for property expenditures of \$600,000 plus cash payments totalling \$40,000 to be made by Erickson over 4 years to earn a 60% interest in the property, with Consolidated Silver Standard retaining a 36% interest and Wilson Mining Corp. Ltd. a 4% interest. Upon Erickson earning its property interest, the project will become a joint venture with further expenditures to be funded by the parties according to their interests. Erickson has committed to spending \$75,000 in the first year and is currently exploring the known gold bearing quartz veins on the property. Samples from these veins collected in 1986 assayed as high as 0.63 oz.gold/ton across 2.5 feet.

SAMPLE	OZ. GOLD/T	OZ. SILVER/T	LEAD%	ZINC%
0984	0.084	2.10	1.10	1.14
0985	.115	2.40	.89	1.92

FIRST ASSAYS OF TAILINGS - Bryan Glen, president, SHOW INTERESTING VALUES reports that K-2 Resources have finished their tailings sampling program at their Spider mine property in the Camborne gold camp, near Revelstoke, B.C. The approximate 75,000 tons of tailings from mining in the 1950's were grid sampled by a Vi-Core drill; 192 drill samples are now in for assay. Two assay results have been received, see table. Sample 0985 was a panned concentrate of sample 0984 and suggests the possibility of concentration by gravity methods. At today's metal prices the gross value of these samples are about \$95 and \$115 per ton respectively.
