

CANOVA RESOURCES LTD. (CVD-V)

EXPEDITOR RESOURCE GROUP LTD. (EXD-V)

ADDITIONAL WHITEMAN CREEK- The Canova/Expeditor 50/50 GOLD BELT CLAIMS ACQUIRED joint venture has acquired the Tick, Tock and Ona claims contiguous and to the west of the Vera claims near Vernon, B.C. northeast of the Huntington/Lacana discovery. (SEE PROPERTY LOCATION MAP GCNL NO. 115, 15JUN88.) The claims have been acquired under an option to earn 100% subject to a 5% net profits interest. The 9 year option is on a schedule of the greater of a 10% net profits or annual payments totalling \$800,000.

The Ona claim covers the old Skookum claim first discovered in 1930 where well mineralized northerly striking quartz veins are hosted in argillites, andesites, tuffs and limestones. Records indicate approximately 200 feet of shafts and drifting from which 127 tons of ore were shipped to the smelter in Trail. Recovery averaged 0.44 oz.gold/t and 17.06 oz.silver/t. Drifting on the veins encountered "free gold and very high values of silver" and sulphides. One sample reportedly assayed at 31.06 oz.gold/t and 198.50 oz.silver/t. On the Vera claims at the Octagon discovery 1,000 ft. to the east spectacular gold values are with steeply dipping, northwest-southwest striking quartz veins which cross-cut upper Triassic volcanics.

Similar structures and host rocks to those found on the joint-venture's Vera and Tick Tock claims are reportedly present on both the Huntington/Lacana Brett property and the Brican Resources Ltd. Gold Star property to the southwest.

PEZGOLD RESOURCE CORPORATION (PEZ-V)

VANSTATES RESOURCES LTD. (VST-V)

ISKUT RIVER PROPERTY OPTIONED- Murray Pezim, chairman of Pezgold Resource Corporation reports reaching an agreement to earn a 50% interest in Vanstate Resources Ltd.'s Ian 6 and 8 claims consisting of 40 units in the Iskut River area, 68 miles NE of Stewart, B.C. for \$25,000 in cash and \$250,000 of exploration by 1June90. A 1987 program identified 3 favourable areas for mineralization. In 1988, additional prospecting, mapping, geochemical sampling, ground and airborne geophysics is planned.

TRIPLE STAR RESOURCE CORP. (TSR-V)

VERNON KALAMALKA GOLD MINE TO BE FURTHER EXPLORED

David Konnert, president has reported Triple Star Resources has arranged a private placement of flow through shares to NIM Resource - 1988 and company Partnership of 255,556 shares at 54¢ each for proceeds of \$138,000. K.Harrison and Associates will receive a finders fee of 10,000 shares. Prior to this share sale the company had 2,365,000 shares issued and uncommitted working capital of \$100,000.

The company is presently diamond drilling from underground on the 2,900 foot level of the Kalamalka gold mine at Lavington, 10 km east of Vernon, B.C. (SEE PROPERTY LOCATION MAP OVERLEAF) This program is testing the down dip extensions of the vein mined at higher levels to produce 7,267 tons which yielded 2,898 oz.gold for a grade of 0.4 oz.gold per ton plus 3,474 oz. of silver. The mine produced between 1934 and 1939. This was the largest gold producer in the north Okanagan. The mine was first discovered in 1896 by following placer showings up Craster Creek to a quartz outcrop. A number of known veins were never explored during the old operations. The old records suggest the mine operators did not know that the chloritic zones around the vein contained high gold values. Recent sampling of the old workings returned the following assay results:

Sample No.	Oz.Gold/t	Width	Sample No.	Oz.Gold/t	Width
No.1	5.04	2' 0"	NO.6	0.376	6' 6"
2	2.24	3' 2"	7	7.10	GRAB
3	2.02	2' 11"	8	9.22	GRAB
4	3.40	3' 0"	9	0.316	2' 0"
5	3.92	3' 0"	10	0.924	5' 1"

The exploration program is under the directions of Searchlight Resources people Peter Dasler and F.Marshall Smith, P.Eng. established by drilling that the vein continues beyond where mining stopped. One of these holes showed 0.924 oz.gold/t across 5 feet 1 inch in the chloritized shear zone and values to 0.254 oz.gold per ton in the adjacent quartz vein. This existing zone can be extended to depths in excess of 500 feet below the present workings if the mineralization conforms to known mesothermal type deposits like the Bralorne camp.

Old open cut trenches yielded high grade assays. The work indicates the veins pinch and swell.

The company plans a second phase of exploration in 1988 to include continued diamond drilling to test other targets on the property as well and geophysical surveys to seek new targets.

SKYLINE EXPLORATIONS LTD. (SKX-V)

NEW GOLD SHOWINGS REPORTED- Significant new gold showings have been found on Skyline Explorations Ltd.'s 100% owned Red Bluff and Red Bird crown grant claims. These claims include a copper-gold porphyritic intrusion just a few hundred meters northeast of Delaware's Twin Zone. Several showings grading 0.1 to 0.9 oz.gold/t have been located. A fault zone cutting the porphyry with a 200m strike length yields values from 0.1 to 0.25 oz.gold/t across 0.3m to 0.8m within the zone. A 5m section of poorly exposed pyritic intrusion carries 0.25 to 0.9 oz.gold/t across 1m of exposed thickness at 515m elevation. At 290m elevation a gossanous vein within mineralized porphyry grades 0.8 oz.gold/t across 0.3m of exposed thickness and 3m of exposed strike length.

Other exploration targets include the Road showing south of the Delaware property which grades 8.5 oz.gold/t across 0.3m and an exposed strike length of 4m. The trend of this shear is similar to trends found on Delaware's property. Significant assays include:

<u>SAMPLE NO.</u>	<u>ACROSS</u>	<u>ASSAY</u>
83MM8	0.8m	0.248
83MM130	1	.242
83MM142	0.3	.214
83MM164	0.3	.829
84MM179	30cm x 20cm talus	.907
84MM180	30cm x 20cm talus	.373
Road Showing 83AK143	0.3	8.527

Diamond drilling ofn the Red Bluff and Red Bird crown grants will begin in mid June with drilling on the Road showing in mid July.

COLIMA RESOURCES LIMITED(CJA-V)

WHITEMAN CREEK GOLD BELT- Colima Resources Limited is in final negotiations with Kettle River Management Ltd. to acquire the JJT-8 mineral claim, 20 units, situated on the Salmon river some 9 km NW of the Huntington/Lacana discovery and 32 km west of Vernon, B.C. Colima anticipates the purchase will be finalized within 7 days.

DUKE MINERALS LTD. (DKM-V)

WHITEMAN CREEK GOLD BELT- Duke Minerals Ltd. has recently acquired by staking a group of claims in the Vernon Mining District in proximity to Huntington Resources Inc. The company continues to acquire ground in the area.
