NEWHAWK GOLD MINES LTD.(NHG-V,T)

GRANDUC MINES LTD.(GDC-V)

UNCUT ASSAY OF 7.479 OZ.GOLD/T OVER 84.6 FT.

IN DRILL HOLE CONFIRMS UNDERGROUND CHANNEL SAMPLES

Donald A.McLeod, TGG, president of Newhawk has reported assays from 9 underground diamond drill holes, on three sections, on the R-8 zone on the Sulphurets property which confirm and extend the highgrade gold results from the underground sampling and earlier drill holes. (SEE DRILL HOLE LOCATION MAP OVERLEAF AND PREVIOUS RESULTS IN GCNL NO.144, JULY 27,1987) The Sulphurets property is located 65 km north of Stewart, B.C. and is held 60% by Newhawk, operator and 40% by Granduc. These holes have established a minimum strike length of 150 feet, a dip length of 150 feet and a width from 5 to 23 feet averaging about 10 feet. Drilling is continuing. The zone is open in all directions. The R-8 zone is close to the West zone and adjacent to the UTC zone. The R-8 zone is close to existing workings and could provide an important additional tonnage of easily mine-able high-grade gold and silver ore. Drilling on the West zone is about 50% complete and results will be reported shortly.
