-----'Northwest Inel							
<p>Ridge Zone on the Iskut River property, 100 km north of Stewart, B.C. The trenches are on 3 separate exposures along the edge of a small ice field, along a strike length of 180 ft. The zone is otherwise covered by ice. The surface drill is presently set up on the edge of the ice & testing the zone with a number of short holes.</p> <p>Underground work had been delayed because of a failed generator. One drill is working underground, one on surface and the proposed extension of the drift is two thirds completed.</p>

ASSAYS FROM MCLYMONT PROPERTY - Gulf International

Minerals Ltd. has reported results from the first 11 diamond drill holes on the Northwest zone of the McLymont property, Iskut River area, B.C. Drilling of the shallow dipping zone is proceeding on 60 to 80 ft. centres. The originally planned 10,000 ft. program has been increased to 13,500 ft. The extra footage will in part test a number of newly defined conductors which represent possible extensions of the zone.
