Elk property

located 40 road miles SE of Merritt in southern B.C.

Fairfield is the operator. PLACER DOME INC. can earn a 50% interest by spending \$2,000,000 on exploration and paying Fairfield \$500,000 or a 70% interest by spending \$4,000,000 and paying \$1,000,000. In both cases, Fairfield will be carried to production decision. A trenching program partially exposed a gold-bearing vein system having a known strike of 2,600 feet. Twelve samples cutting the zone at 15-foot intervals along a 200-foot length, between trenches T89-2 and T89-3, averaged 0.432 oz.gold/ton over a 6.6-foot true width. Results from sampling in other trenched areas are being compiled. Native gold occurrences were encountered at several locations. During October, 12 HG/NQ drill holes totalling 2,500 feet were completed on four widely spaced sections over a 2,200-foot strike length. This preliminary drilling explored the system to a depth of 700 feet down dip. All holes intersected gold-bearing structure with eight returning encouraging results; see table above. (SEE MAP OVERLEAF P.1)

Fairfield Minerals has interests in seven other gold properties in the Elk area. Preliminary exploration was carried out on several last summer with a number of gold targets identified. More work is planned. The

company reports cash and term deposits on hand total \$2,240,000. (SEE GCNL No. 176 FOR EARLIER RESULTS)
