WESTERN CANADIA

TEESHIN RESOURCES LTD. (TEE-V)

DRILL RESULTS - Stafford Kelley, president, reports
Teeshin Resources Ltd. has received
assay results from the drilling program at the Dome
Mountain project near Smithers, B.C. Teeshin has a 66
2/3% interest. CANADIAN-UNITED MINERALS INC. holds 33
1/3% and TOTAL ENERGO GOLD CORP. has a 15% net profits
interest. (SEE GCNL Nos. 143, 120, 115 & 100 FOR MORE
DATA) The drilling is designed to test induced
polarization anomalies in the areas of known reserves,
in particular the Boulder zone and two other anomalies
below the ore body. The present drilling has
demonstrated the easterly extension of the Boulder
zone. Hole D 89-5 intersected the zone 1,000 feet east
of the present orebody and assayed 0.63 oz.gold/ton and
3.895 oz.silver/ton over 1.0 meters (3.3 ft). Hole D
89-6 intersected the zone 800 feet east of the present
orebody and returned 1.7 oz.gold/ton and 9.31
oz.silver/ton over 1.5 meters (5 ft).

A second mineralized zone was encountered that
parallels the easterly extension of the main zone. Hole
D 89-1 intersected this parallel vein and graded 0.113
oz.gold/ton and 3.33 oz.silver/ton over 1.07 meters (3.5
ft). In total, six holes have been drilled to verify
the extension of the strike length of the orebody.

Eight holes have also been drilled to depth below
the westerly end of the boulder orebody. Hole D 89-8
assayed 0.47 oz.gold/ton and 2.87 oz.silver/ton over 4
meters (13.5 ft). Management believes this added strike
length and depth to the zone could possibly triple the
present orebody of 300,000 tons averaging 0.355
oz.gold/ton and 2.34 oz.silver/ton. It is hoped the
present drilling program will increase reserves for a
five-year mine life. Further results will be reported
when available. Drilling has stopped for the Christmas
break and will resume the first week of Jan/90. (SEE
