MORE SULPHURETS ASSAYS - Donald A. McLeod, president, reports that further assays from drifting on the Sulphurets property 50 km north of Stewart, B.C. has more than doubled the previously announced strike length of the structure. SEE TABLE OF DRILL RESULTS OVERLEAF P.1. The property is 60%-owned by Newhawk, the operator, and 40% by Granduc Mines Ltd. The underground exploration program has now established a strike length at the 1200-meter level of 271 feet averaging 1.283 oz.gold/ton and 15.37 oz.silver/ton across an average exposed width of 8.8 feet. The R-8 structure has also been exposed by crosscutting on the 1200 and 1150-meter levels and raising from the 1150-meter through to the 1250-meter level. Underground diamond drilling on R-8 to closely define reserves as well as drilling several step out holes is now in progress. Intersections received to date have encountered greater than expected widths, particularly in the upper portion of the zone. Holes reported from sections 199+60N through 200+10N are still in drilling; holes from section 200+20N are step out drilling. (SEE GCNL Nos. 234, 186, 167 & 163 FOR EARLIER INFORMATION)
