EAST ZONE ASSAYS REPORTED- Canadian-United Minerals, Inc. and Gunner Gold Mining Corp. released diamond drilling results from the East zone of the Fireweed property, 30 miles northeast of Smithers, B.C. Gunner Gold can earn a 50% interest, convertible to Canadian-United shares, by spending \$5,000,000 on the property. The East zone has now been traced by shallow

drilling over some 1,800 feet and is open along strike and to depth. Assays are awaited on five holes drilled to test the down dip extensions of the West zone. Drilling is expected to resume on the West, East and 1600 zones when weather conditions permit. (SEE GCNL No.75, 19Apr89 for previous drilling results).
