-----'assay
results from four holes drilled on the Sib 1-16 claims
adjoining the Calpine-Stikine No.21 zone discovery at
Eskay Creek, 50 km north of Stewart, B.C. American Fibre
holds an option to earn a 50% interest in the prospect
from Silver Butte Resources. Geologically, the property
contains the saem host rock assemblage as Calpine-
Stikine, silicified rhyolite, tuffs, volcaniclastic sand
shale situated along the same structural trend. Soil
sampling and induced polarization surveys identified a
coincident anomaly 9800 feet long and up to 1,300 feet
wide. Twenty drill targets have been located and one
drill tested. Drilling is continuing.
