REDFERN RESOURCES LTD. (RFR-V,T)

COMINCO LTD. (CLT-V,T,M)

ASSAYS RECEIVED - John A. Greig, chairman, reports

Redfern Resources Ltd., 40% and joint  
venture partner Cominco Ltd., 60%, have received diamond  
drilling assay results for the interval from 1,784.5 -  
1,948.5 feet in hole No.22 at the Tulsequah Chief  
project in northwest B.C., 40 miles east of Juneau,

Alaska. The 164-foot intercept, estimated at 110 feet  
true width, assayed

2.92% copper, 1.58% lead, 9.09% zinc, 0.112 oz.gold/ton  
and 4.96 oz./silver/ton.

The hole has now been completed to a depth of 2,580  
feet. It did not intersect a second deeper mineralized  
horizon. Further drill results will be required before  
more definitive geological information can be provided.  
Due to the importance of the new higher intercept, the  
current drill program will be expanded. Hole No.23 is  
now drilling and is targeted to intersect the zone 300  
feet down-dip from the intercept in hole No.22. A  
second drill rig will be mobilized to the property.  
(SEE GCNL No.147, 31Jul90, P.1 FOR PREVIOUS INFORMATION)
