MORE DRILL RESULTS - Laurence Stephenson, president,
reports Kokanee Explorations Ltd.
has received more drill results from the Vine property

16 km south of Cranbrook, B.C. Under an option agreement with Cominco Ltd., Kokanee can earn a 97% net revenue interest, 100% working interest, subject to a 3% net smelter return royalty, by spending \$1,000,000 on exploration by 31Dec91. Kokanee has earned a 90% interest. See table above for assays.

Hole KV-90-36 is located on the east side of the zone and hole KV-90-41 is located 567 meters to the west of hole KV-90-36. This new "41" zone has not been identified in previous drilling and represents a significant increase in potential reserves as it is open in all directions and in particular to the west. Further drilling to define both the "41" zone and the mineralization above it is currently being planned. (SEE GCNL No.112, 12Jun90, P.1 FOR PREVIOUS RESULTS)
