STIKINE RESOURCES LTD. (SKZ-V)**

TOK CLAIM GROUP ASSAYS - John Ivany, president, reports Prime Resources Group Inc. and 50/50 joint venture partner Stikine Resources Ltd. have substantially completed surface exploration of the 21 Zone at the Eskay Creek project located about 60 miles northwest of Stewart, B.C. To date, there have been 665 surface diamond drill holes.

An exploration decline has been driven to test the Main Contact ore lens at several intervals. The first cross-cut through ore lies in the gap in the Eskay Creek claims which is owned by ADRIAN RESOURCES LTD. (ADL-V) and is contained entirely within the TOK claim group. The wall-chip assay results indicated a grade-width return of 1.56 oz.gold/ton and 40.5 oz.silver/ton over a 10-meter width. This 10-meter section also included grades of 2.51 oz.gold/ton & 62.6 oz.silver/ton over a 5.54-meter width.

The drift will continue along the strike of the orebody and cross-cuts will be driven through the orebody at selected intervals over the next three months. (SEE GCNL No.180, 18Sep90, P.1 FOR OTHER PROJECT INFORMATION)
