THUMPER RESOURCES CORP. (TPM-V)

SOIL SURVEY RESULTS - Charles S. Underhill, reports
Thumper Resources Corp. has received significant results from soil surveys and rock sampling programs on its GAB 6 claims located 20 km southeast of the Bronson airstrip in the Iskut River area 75 miles northwest of Stewart, B.C. Thumper has an option to earn a 100% interest in the property by spending \$225,000 over three years.

Field work in 1990 entailed prospecting, soil geochemical surveys and geological mapping. In addition to gold geochemical anomalies are significant lead (up to 16.20%), zinc (up to 3.68%) and silver (up to 3.37 oz/t) values associated with northeast-trending shear zones. Barium, cadmium, arsenic, antimony, strontium and copper values were elevated as well. All data are presently being compiled and evaluated prior to further work which will likely include a limited drill program.
