## WESTMIN RESOURCES LTD. (WMI-V,T,M)

FURTHER MYRA FALLS ASSAYS - Bruce K. McKnight, vice president, reports Westmin Resources has received complete assays results from drill hole 15-446, Section 12+60E, -76 degrees south, at Myra Falls, 50 km west of Campbell River, Vancouver Island, B.C. The hole encountered 52.9 meters of massive sulphides containing two ore grade intervals of 22.6 and 12.3 meters core length.

INTERVAL	LENGTH	GOLD	SILVER	COPPER	LEAD	ZINC
<u>METERS</u>	<u>METERS</u>	<u>G/T</u>	<u>GRAM/T</u>	<u>%</u>	<u>%</u>	<u>%</u>
148.0-170.6	22.6	1.4	222.0	2.8	0.5	20.4
170.6-175.0	4.4	.3	49.0	.7	.4	5.1
175.0-187.3	12.3	.3	21.5	1.6	.1	4.4
187.3-200.9	3.6	.2	3.4	.4	.1	.1

Hole 15-448, on the same section, -66 degrees south, is in progress and has encountered 1.5 meters of ore grade material visually estimated at above 12% zinc, but below 0.5% copper at 155.5 meters. This intersection, which was bounded by a fault contact at the top, is 25 meters south of the high grade intersection in hole 15-446. The hole has passed into quartz feldspar porphyry and will be continued to try to intersect the extension of the thick massive sulphide lens encountered in hole 15-446. The holes on sections 14+00E and 15+85E are proceeding toward target depths. (SEE GCNL No.104, 30May91, P.1 FOR PREVIOUS INFORMATION)
