MULTI-COMPANY EXPLORATION PLAY UNDERWAY - Murray Pezim, chairman, reports a number of PRIME EQUITIES INC. (PEQ-V) affiliated companies have mobilized field crews to Metla area mineral properties 40 km NW of Telegraph Creek, 60 km SE of the Tulsequah region and 300 km northwest of Stewart in northwestern B.C. (SEE OVERLEAF PAGE 1 FOR AREA MAP) Adrian can earn a 50% interest in the nine

20-unit claims from Galico which comprise the Trapper Lake property adjacent to the northern boundary of Galico's claims. Adrian/Galico funded a recent airborne geophysical survey on their respective properties. Adrian is planning an initial work program of mapping, prospecting, geochemical sampling and trenching at Trapper Lake to follow up on the geophysical results. Cost, including the airborne survey, is estimated at \$100,000. Upon favourable results, diamond drilling will be carried out this year.

Core Ventures has mobilized field crews to the Golden Met and Met II projects. The company can earn a 50% interest in the Golden Met claims from CONSOLIDATED PARKLANE RESOURCES INC. (PK-V) and a 50% interest in the Met II from SILVER TALON RESOURCES LTD. (SVO-V). Both properties are contiguous and adjoin the south and east boundaries of Galico's claims. The Golden Met property has two gold showings, the best returning 0.185 oz./ton. Core plans an initial program of mapping, prospecting, geochemical sampling and trenching on both the Golden Met and Met II claims budgeted at \$150,000. If warranted, diamond drilling will follow.

Galico is planning a program of drilling, mapping, prospecting, geochemical sampling and geophysical surveying on the 20-unit Metla project where the company can earn a 60% interest from COMINCO LTD. Previous work located a large zone of gold and base metal-bearing boulders 5,500 feet long and up to 900 feet wide. Twenty assays averaged 0.632 oz.gold/ton with base metals as high as 7.40% zinc, 2.06% copper and 1.81% lead. Anticipated costs are \$1,100,000, which will complete Galico's earn-in requirements. On the 100%-owned Metlatulin Mountain project, which surrounds the Metla claims, Galico will carry out prospecting, mapping and geochemical sampling costing \$100,000.

Gigi Resources Ltd. and Goodgold Resources Ltd. have sent their field crews to the four 20-unit Piperdash claims tied onto the northern boundary of the Trapper Lake ground. An initial work program of prospecting and geochemical sampling is planned at a \$50,000 Contingent on good results, diamond

Glider Developments Inc. will carry out an initial program of mapping, prospecting, geochemical sampling, geophysical surveying, trenching and drilling on the 170-unit Outlaw project eight miles NW of Galico's Metla project costing a minimum \$200,000. Glider can earn a 50% interest from Consolidated Parklane by paying \$100,000, issuing 100,000 shares and spending \$1,200,000 on exploration over three years. The Outlaw property features two strong multi-element geochemical anomalies on the northern and southern parts of the property. The Outlaw anomaly (north area) was drilled with the best assay returning 0.242 oz. gold/ton over 0.95 meters.

Golden Ring Resources Ltd. plans an initial \$50,000 program on the Borg project adjacent to the Galico Metla claims including mapping, prospecting and geochemical sampling to be followed by drilling upon encouraging results. Golden Ring can earn a 50% interest from INTERNATIONAL SUREVA RESOURCES LTD. (ISN-V).

Slocan Development Corp. Ltd. plans an initial \$100,000 program on the Sutlahine River project 12 miles north of Trapper Lake that will include mapping, prospecting, geochemical sampling and trenching to be followed by drilling upon favourable results. Slocan can earn a 50% interest from Consolidated Parklane.

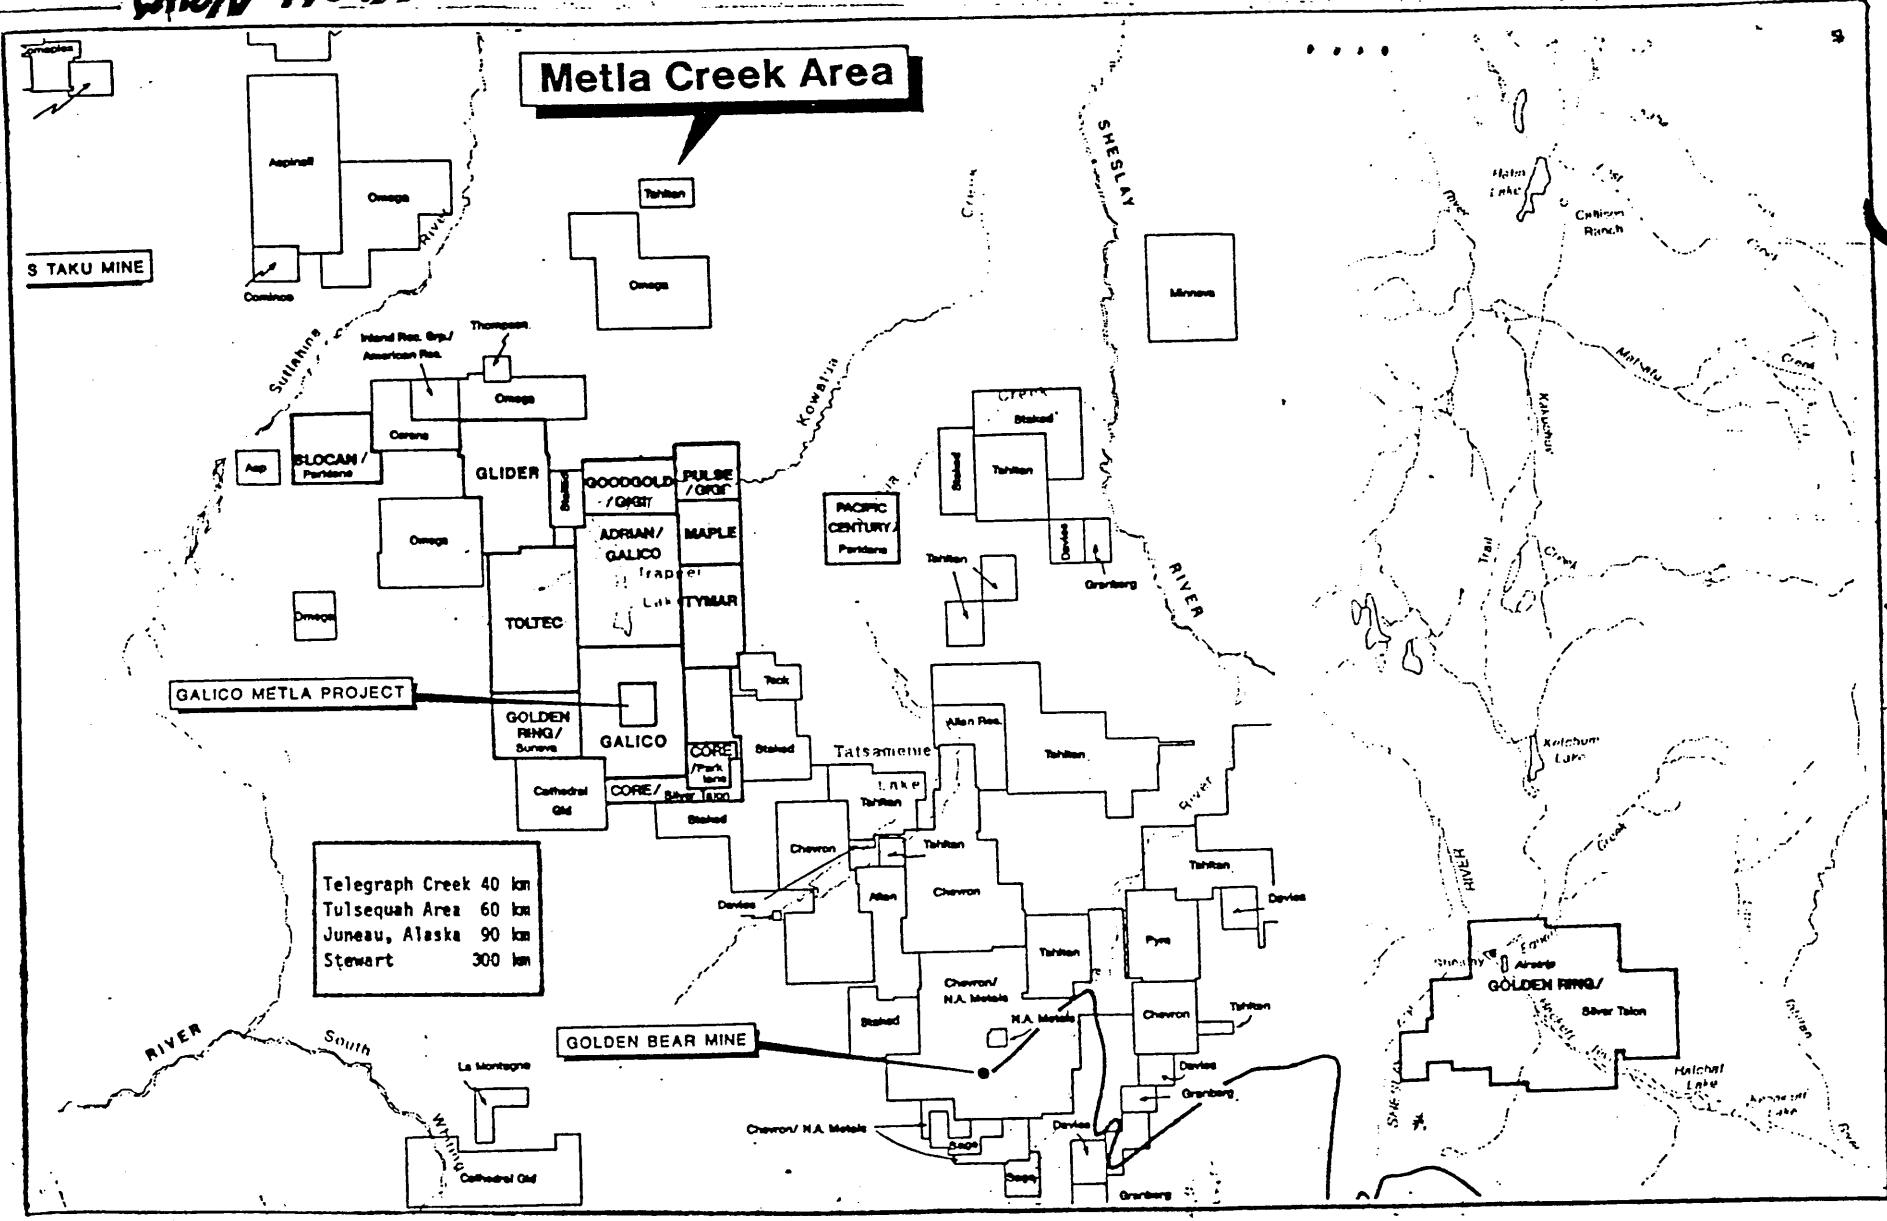

Toltec Resources Ltd. plans a \$40,000 initial work program of mapping, prospecting and geochemical sampling on the eight 20-claim unit Tunjony Lake project one mile west of Trapper Lake. Drilling will follow good results.

Tymar Resources Inc. will complete an initial \$50,000 program on the Upper Tats project five miles east of Trapper Lake on the eastern boundary of Galico's Metla project to seek diamond drilling targets. Tymar can earn a 50% interest from Silver Talon.
