ACHERON RESOURCES LTD. (ACZ-V)

JORDEX RESOURCES INC. (JDX-V)

DRILLHOLE IN PROGRESS - Ronald Philp, president, Acheron Resources Ltd., reports the first hole of a 12-hole diamond drill program on the Wann Group, northern Vancouver Island, B.C. was completed at a depth of 547 feet. The hole was drilled to test a copper geochemical anomaly along the north margin of a silica cap similar to that overlying much of the Hushamu porphyry copper/gold deposit to the west. Sulphides occur as disseminations and fracture fillings throughout the hole varying up to 30% in content. Assays are expected in about two weeks.

A second hole was started 2Apr92 about two km northwest from hole No.1. This hole lies about 700 feet east of an old BHP assessment hole which just penetrated the silica cap and stopped in copper-bearing tuffs.

The Wann property is held 100% by Acheron, subject to an underlying royalty. Jordex Resources Inc. can earn a 55% interest by completing the current program. (SEE GCNL No.63, 30Mar92, P.1 FOR PREVIOUS INFORMATION)
