TROJAN VENTURES INC. (TJV-V)

SAMPLE RESULTS AWAITED - Soil survey samples of a section of the Gold Drop property, 13 km NW of Greenwood, B.C., were taken below the overlaying volcanic ash horizon and evaluated by computer graphics format. Profiles have indicated anomalous gold values at ten locations with anomalous values for copper and zinc showing at 33 grid points. Study of the results is continuing. A diesel locomotive has been installed underground to speed the bulk sampling program. The company has completed its annual audit and filed it with regulatory authorities and will be mailed to shareholders by Aug. 30, 1992.
