HOLE NO.	INTERVAL FEET	WIDTH FEET	GRADE OZ/T	
PC-92-C12	927.3-936.7	9.4	0.70	Canarc Resource, Suntac Minerals and Rembrandt Gold Mines
PC-92-C13	778.2-840.1	61.9	.20	' have reported further
	including 826.6-840.1	13.5	.52	' assays from drilling

-----' at the Polaris-Taku property in NW B.C. Drill holes PC-92-C12 and C13 were drilled 250 feet east and 100 feet above PC-92-C11 respectively, confirming the high grade C vein extends several hundred feet further to the southwest where it intersects the AB vein, forming a larger continuous mineralized zone as reported in C11 and C13.

The next two drill holes are targeted to interest the C and AB veins further updip and downdip from C11 to test the continuity of this larger mineralization zone around C11. Further assays will be released 2Sept92. (SEE GCNL NO.134, 13JUL92, P. 3. FOR PREVIOUS DRILL RESULTS AND NO. 152, 7AUG92, P. 3 FOR THREE COMPANY MERGER PLANS).
