ISKUT RIVER JOINT VENTURE FORMED - Charles S. Underhill,  
president, reports

Jazzman Resources Inc. and Hector Resources Inc. have entered into a joint venture agreement on Hector's Iskut River, B.C. properties comprising 137 units. Jazzman has acquired an undivided 50% working interest in the Spray 1 and 2, Sky 4 and 5, Stu 4 and 5 and the NWG 6 and 7 mineral claims by paying Hector \$90,000.

Exploration began in 1987 has identified several areas of gold mineralization on the property which is located 10 km NE of Skyline's Johnny Mountain mine and Cominco's SNIP deposit.

There are four prospects on the claims with encouraging results. The Timber zone hosts a number of narrow quartz-pyrite veins which have returned up to 2.706 oz.gold/ton. Chip samples from the East zone discovery trench yielded values up to 0.432 oz.gold/ton across 75 cm. The Golden Spray zone hosts gold-bearing quartz veins along a 1,000-meter structure with values in trenches and drill core ranging up to 0.329 oz.gold/ton. Two main silicified shear/quartz veins have been located at the West zone where mineralization in the veins comprises chalcopyrite, pyrite, sphalerite and galena. Grab samples have graded up to 0.764 oz. gold/ton, 10.31 oz.silver/ton and 7.21% zinc. Exploration is planned subject to funding.
