ENCOURAGING TULSEQUAH CHIEF DRILL RESULTS - John Greig,
 president,

Redfern Resources, reports assays for drill holes 92-36 and 37 on the, now 100% owned, Tulsequah Chief property 50 miles east of Juneau, Alaska in NW B.C. The company is encouraged by the results, particularly the confirmation from Hole 92-36 that the thick H lens extends to depth. Exploration drilling continues with two underground drills operating 24 hours.

Detailed surface mapping has been completed at the Tulsequah Chief site. On-going surface mapping at the Big Bull site indicates the same favourable geological environment as the Tulsequah Chief. (SEE GCNL No.169, 1Sep92, P.3 FOR OTHER INFORMATION).
