NO. 189 (1993)
OCTOBER 1, 1993

NORTH AMERICAN METALS CORP. [NAM-V]

TRENCHING CONFIRMS - Ian McDonald, chairman, North American
NEW GOLD DISCOVERY Metals Corp., reports trenching on the
Kodiak Zone near the Golden Bear Mine in

northwest B.C. has confirmed the new gold discovery reported in GCNL
NO.185, 27Sep93, P.1.; see table below:

TRENCH NO.	WIDTH METRES	GRADE GRAMS/TONNE	WIDTH FEET	GRADE OZ/TON
1	16.0	5.41	52.5	0.158
2	18.0	7.70	59.0	.225
3	19.0	3.57	62.3	.104

Trench No. 1 was the discovery trench. Trench No. 2 was

excavated 15 metres north of No. 1, while trench No. 3 was 25 metres south of trench No. 1. An outcrop 40 metres south of trench 3 returned 7.18 grams gold/tonne over 3.0 metres (0.21 oz.gold/ton over 9.8 ft.). The work extended the zone over a strike length of 80 metres, and it remains open north and south. Although the terrain made more trenching difficult, winter drilling will not present a problem. Preliminary metallurgical testing of the trench samples showed the mineralization is oxidized and non-refractory, and three bottle-roll tests averaged 96% recovery. A two-phase winter drilling program will mobilize immediately. Phase 1 will be a single row of holes below the trenches to confirm the depth of the mineralization, locate the oxide sulphide contact, and obtain additional metallurgical samples. A second phase will further test the strike length and depth of the zone. **REPADRE CAPITAL CORP. [RPD-V,T]** has a 7.5% NSR. The mine is owned and operated by North American Metals, an 85%-owned subsidiary of **WHEATON RIVER MINERALS LTD.[WRM-T]**.
