GETCHELL RESOURCES INC. [GHS-V]

MORE GOOD COPPER GRADES REPORTED - James T. Gillis, president has reported Getchell Resources has received from Teck Corp. the assay result from hole 94-17, which cut two mineralized zones:

-from 51 metres to 69 metres (18m) assayed 1.1% copper

-from 126 metres to 217 metres (91 m) assayed 0.93% copper

The intervening section, from 69 metres to 126 metres (57 m) is roughly 0.2% copper. The entire 176 metre (580 ft) interval, from 51 metres to 227 metres, averages 0.61% copper. Check assays are pending. True widths of the zone are yet to be determined.

This is the first of seven holes to be drilled in the second phase of 1994 drilling on Getchell's Rainbow property located near Teck's operating Afton mine 10 miles west of Kamloops, B.C. The assays were provided by Echo Tech Labs of Kamloops, B.C.

Hole 94-17 is collared 35 metres east along the same section as previous hole 94-14, and was drilled along the same azimuth. As previously reported, hole 94-14 returned 62 metres (203 ft.) of 0.7% copper.

Drill holes 94-21 and 94-22, located 50 metres north and south of these intersections are visually mineralized. Assays are pending. Drill holes 100 metres north and south of these intersections are not mineralized. The current hole, 94-23, is testing the eastward extent of the mineralized zone and should be completed by October 6.

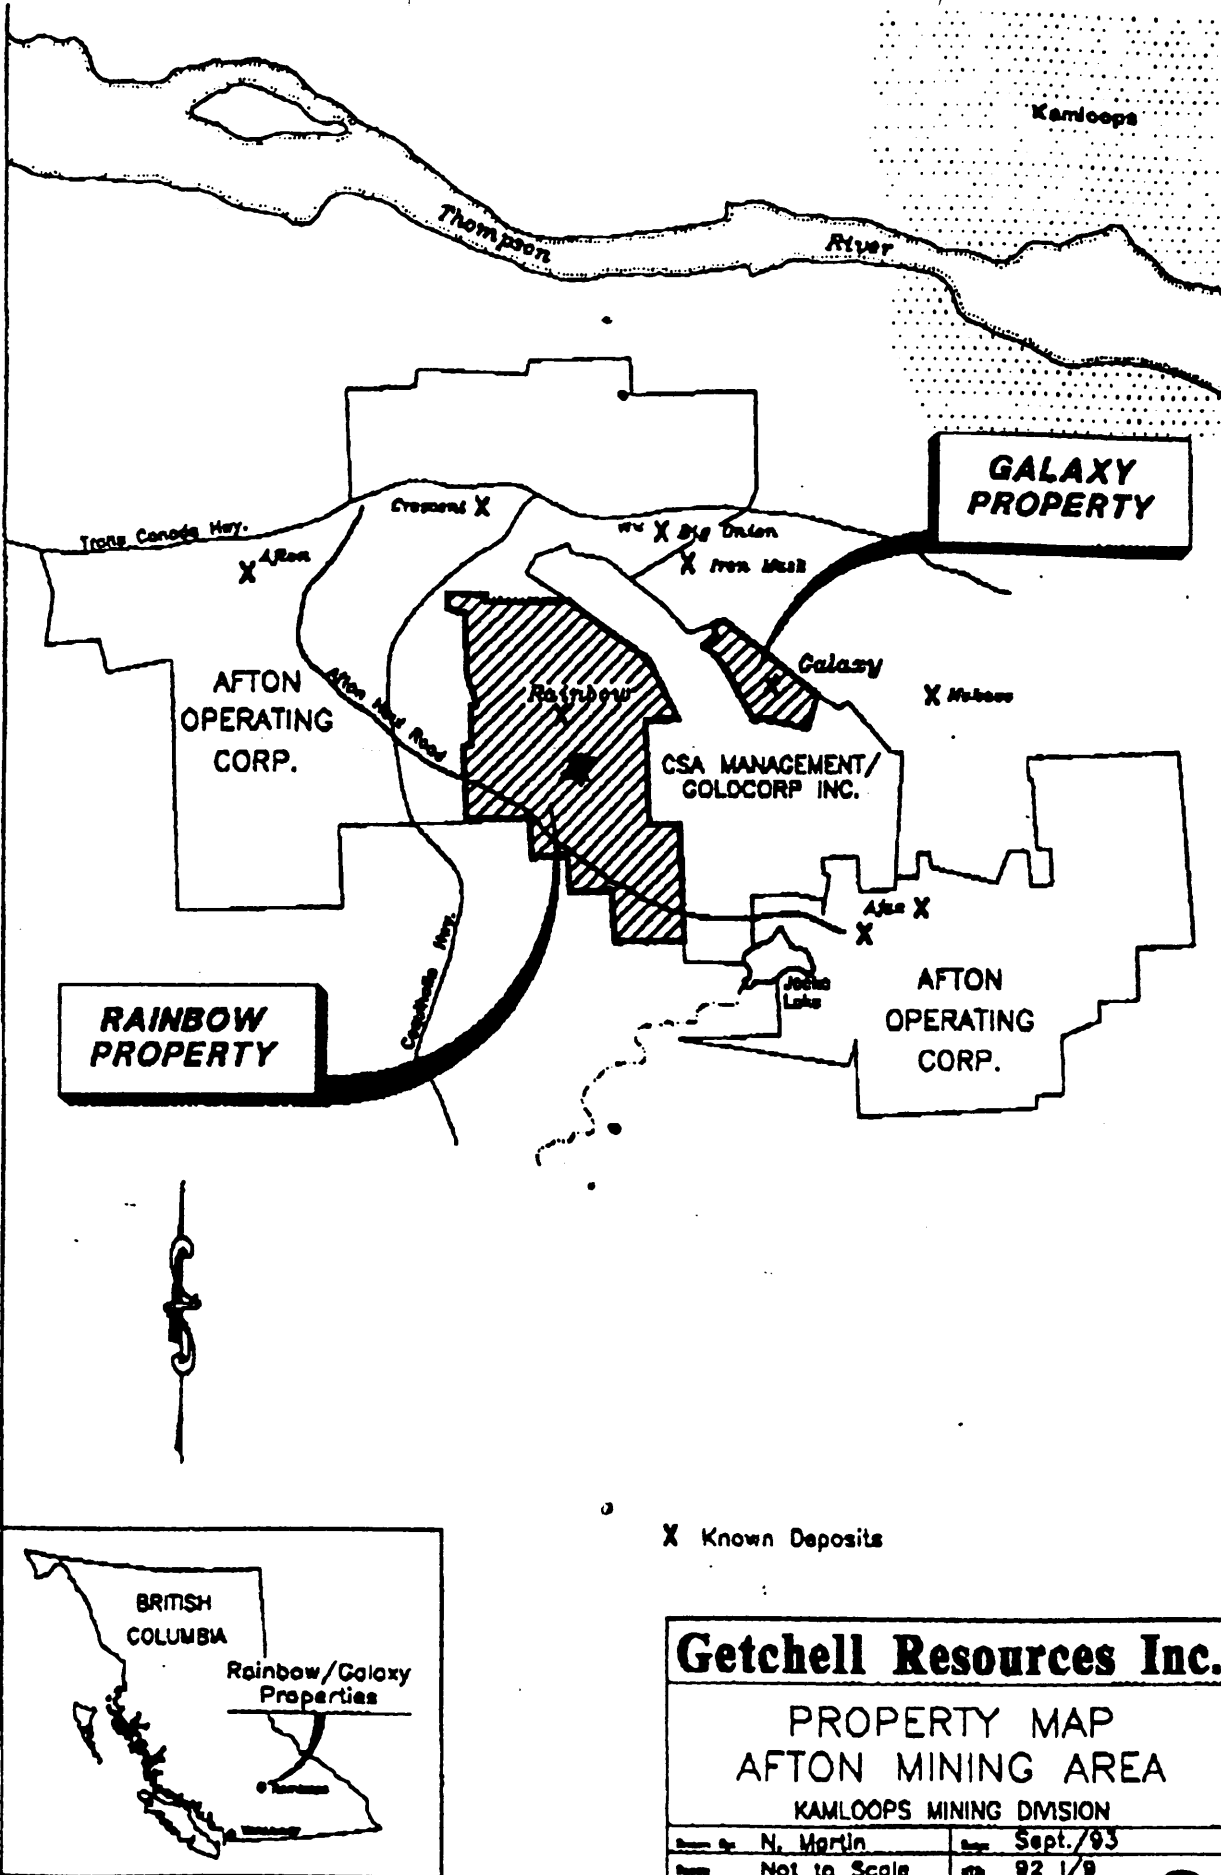

Teck has now earned a 70% interest in the Rainbow property which is subject to a 2% net smelter return royalty owned by Deak Resources, half of which may be purchased by Teck for \$500,00. (SEE LOCATION MAPS OVERLEAF PAGES 1/2 AND GCNL NO.177, P.3, SEPT.15, 1994 FOR PREVIOUS RESULTS).
