## YELLOWJACK RESOURCES LTD.

[YJK-V] 13,160,424 SHS,

## HEMLO GOLD MINES INC. (HEM-V,T,M)

**KATIE EXPLORATION CONTINUES** - Ken Murray, director,  
Yellowjack Resources

Ltd., reports work will resume at the Katie property located seven km southwest of Salmo, B.C. Mineralization is an alkalic porphyry hosted copper/gold deposit. The property is not in an environmentally sensitive area, and has all necessary infrastructure. The property is owned 57% by Yellowjack and 43% by Hemlo Gold Mines Inc. Yellowjack is the operator. Hemlo may participate in the program or have their position diluted.

A new geologic interpretation of the drill data shows a northwest strike and a steep northeast dip of the mineralization. The deposit is open to the northwest, depth, and possibly to the southwest. New interpretation shows properly oriented drill holes will expand the main zone dimensions and could increase the copper grades.

The first phase of the program will drill test the main zone with five drill holes to a depth of 1,000 feet each. If higher grade intersections are encountered as expected, this theory will be applied to the West Zone and the 17 Zone in Phase 2. Potential exists on the property for one or more 100 million-ton zones of economic grade copper/gold mineralization. The program will start when permitting has been completed.

**CORRECTION:** In GCNL NO.151, 9Aug94, P.1 in the Yellowjack/Solomon press release, the "325 ounces of gold" should have read "3.25 ounces of gold."
