ECSTALL MINING CORPORATION

[EAM-V] 4,403,000 SHS.

GEOLOGICAL DATA RECEIVED - Chris Graf, president, reports subsequent to Ecstall Mining Corp.'s recent press release (SEE GCNL NO.58, 23Mar95, P.4) regarding the Gold Commissioner's Order confirming Ecstall's ownership of the North 1 claim, the company had meetings with representatives of Canarc Resource Corp., who stated that by using a 1939 vintage claim/topography/grid map for control they deliberately avoided carrying out exploration work on that portion of Ecstall's North 1 claims referred to herein as the "Gap" (about 300 feet wide and 2,000 feet long).

Canarc also stated that, by using this map as a reference, the northern most holes were located on their claims about 75 metres south of Ecstall's North 1 claim Gap. These northern most holes are PC-94-No.11 returned 19.3 feet grading 0.25 oz.gold/ton gold and PC-94-No.12 returned 56.3 feet of 0.084 oz. gold/ ton.

The strike extension of the North zone gold system was shown, by Canarc's surface exploration work, to continue north from their drill holes PC-94-No. 11/12, through Ecstall's North 1 claim Gap, to their north adjoining claim where another gold anomaly over 1,200 feet long was located. An independent legal survey of Ecstall's North 1 and Canarc's Crown grant claim boundaries, relative to the location of the North Zone gold mineralized system, is to be carried out this summer.
